ABSTRACT

This bibliography provides abstracts of 531 state reports selected from the ERIC document collection. Covering ERIC accessions from the period 1968 through June 1977, the abstracts greflect the expansion of state interests and activity in postsecondary, planning and coordination. The period of rapid growth in the number of two-year colleges in the mid-60's is reflected by feasibility studies for state junior college systems and standards for facilities and operations. Programs for the disadvantaged, open access, and the management and evaluation of vocational programs are concerns also evident among the early documents. Transition to the current period of stationary enrollments and reduced resources, and the concurrent expansion of state regulatory powers, are reflected in renewed discussions of college role, state-local relationships, and studies of unit costs, alternative funding formulas, program duplication and other measures of cost effectiveness. Between the earliest and latest reports are basic statistical compilations. studies of transfer success, guidelines for program development, and institutional surveys of many types. The abstracts are arranged by state, with 46 of the 50 states represented. Because the abstracts are reproduced exactly as originally published, variable typography may effect the legibility of some entries. (Author)

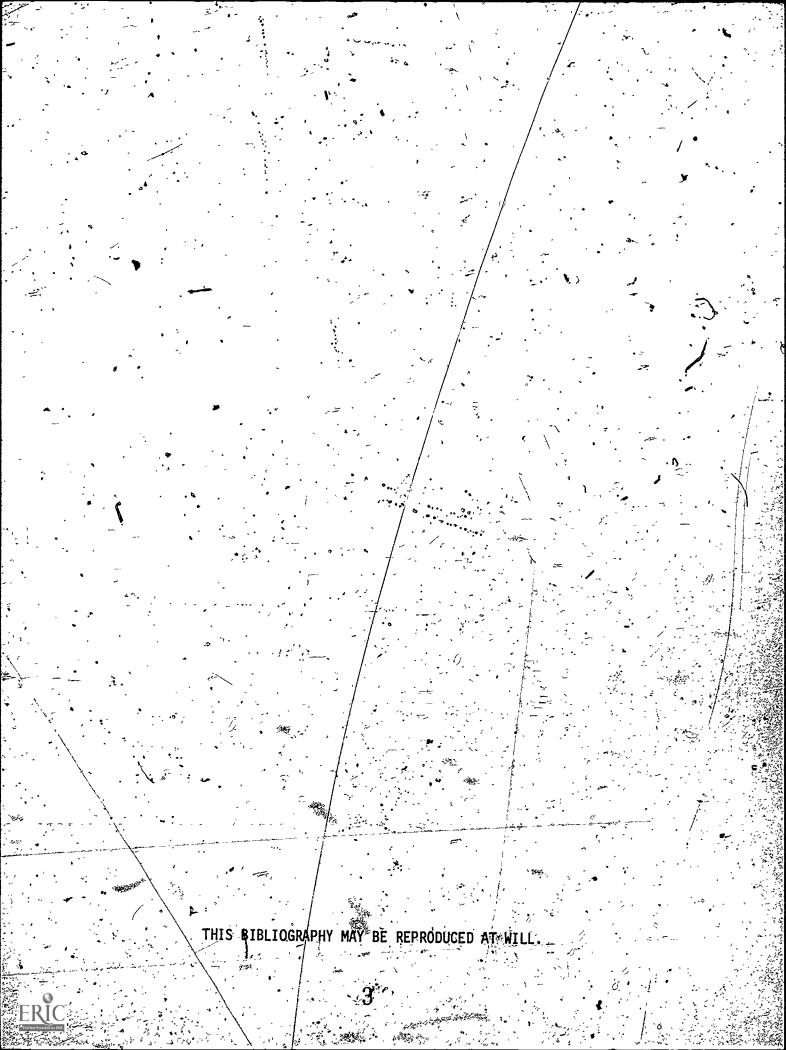

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort * to obtain the best copy available. Nevertheless, items of marginal * reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not * responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original. *************************************

STATE REPORTS ON TWO-YEAR COLLEGES: A SELECTED BIBLIOGRAPHY OF ERIC DOCUMENTS

Compiled by Barbara Booth

96 Powell Library Building University of California Los Angeles 90024

August 1977 .

In November of 1976 the ERIC system celebrated its tenth birthday with a special anniversary issue of <u>Resources in Education</u>, the ERIC abstract journal. While ERIC has been generally thought of as a source of current information, after ten years—and about 130,000 documents—the richness of the document collection as a source of retrospective and comparative information is becoming apparent. The depth and breadth of ERIC's coverage of the educational report literature are well illustrated by the 531 abstracts compiled in this bibliography of state reports related to community and junior colleges, technical institutes, and postsecondary area vocational schools.

The decade 1966-1976 witnessed the development of coordinated state systems of two-year colleges as well as that of ERIC. The abstracts reproduced here reflect the expansion of state interests and activity in postsecondary planning and coordination. Some of the earliest. documents cited are reports of state feasibility studies and needs assessments for two-year college systems. Discussions of the roles of two-year institutions, their relationships with other higher education components, and alternative governance structures are prevalent among the early documents. The period of rapid growth in the number of two-year institutions during the 1960's is evidenced by the publication of guidelines for establishing new colleges, for site-selection and construction of facilities, and of standards for college planning and operations. The development of programs meeting the needs of disadvantaged students, open access, and the management and evaluation of vocational programs are concerns evident among the early documents. that remain throughout the bibliography.

New circumstances are reflected in the more recent reports...

The changing nature of the two-year college student, as documented in many reports on student characteristics, is also apparent in critical analyses of enrollment projection methodologies based on high school graduation rates. Transition from an era of growth to one of stationary or declining enrollments and reduced fiscal resources is signaled by an increasing number of studies examining alternative formulas for state funding and proposals for financial reform. The development

and implementation of systems for standardized data collection and reporting, planning and evaluation models, unit cost studies, and of attempts to deal with problems of program duplication reflect pressures toward operational efficiency and productivity. Concurrently, the expansion of state regulation of college operations, perhaps abetted by the investiture of new powers in "1202" commissions, has brought forth renewed discussions of state-local relationships, of jurisdictional authority among state boards and commissions, and of institutional autonomy. Competition for students among two- and four-year colleges has produced new or refined definitions of institutional jurisdictions, as exemplified by guidelines for outreach activities.

Between the earliest and latest documents are basic statistical compilations, articulation agreements, studies of student mobility and of transfer success, cost effectiveness studies, institutional surveys of many types, state-wide follow-up studies, budgeting manuals, surveys of high school students' post-high school plans, and guide-lines for the development and evaluation of special programs.

While this bibliography reflects state-level interests and concerns, it is neither a complete record of state publications on two-year colleges nor an authoritative compilation of the most significant documents. The ERIC Clearinghouses depend primarily on the voluntary submission of materials for inclusion in the collection; many important documents may have been missed. In addition, only a partion of the available ERIC documents are represented. In order to include full abstracts of documents yet keep the bibliography within reasonable size, certain types of documents have been excluded categorically: curriculum guides, reports and studies focusing on local areas, older materials dealing with manpower requirements and specific occupational. curricula, sponsored studies and project reports resulting from grant awards to local institutions. With a few exceptions, conference and workshop reports have also been excluded. No document was considered for inclusion unless two-year institutions were mentioned in the abstract or in the indexing terms, a criterion that has affected the representation of those states with single postsecondary governance systems whose reports tend to cover institutions at all levels and which necessitate abstracting and indexing from a broad perspective

Since the document abstracts are reproduced here exactly as originally published, it was not possible to include materials acquired during ERIC's first year, from November 1966 through December 1967, when RIE (then entitled Research in Education) had a very different publication format. Unfortunately this has meant the exclusion of the very earliest studies and master plans.

A bibliography of state reports on two-year colleges was first suggested as a Clearinghouse publication by Fred Wellman, then Chairman of the National Council of State Directors of Community and Junior. Colleges and a member of the Clearinghouse Advisory Board. Candidate documents were identified through a combination of manual and computerized searching methods, and were then reviewed for their current or historical interest. Omissions of important documents may have occurred through a failure to identify all of the appropriate issuing agencies. We welcome the contribution of reports not yet available in the ERIC collection which may add to its usefulness as a resource for post-yes secondary education.

Organization of the Bibliography

This bibliography provides abstracts of 531 state reports related to two-year colleges selected from the ERIC document collection. The abstracts are organized by state, and within each state section are arranged in rough chronological order so as to display trends and relationships. Forty-six of the fifty states are represented. Entries for some series of reports with abstracts descriptive of the contents rather than informative have been grouped together out of chronological sequence; full abstracts have been retained only for the latest editions of such reports.

The abstracts are reproduced exactly as originally published in ERIC's abstract journal Resources in Education (formerly Research in Education); thus variations in typography and print quality are present. The small size of type necessary for the economical publication of a major abstracting journal does not lend itself to adequate microfiche reproduction. Hence copies of this bibliography will not be available from the ERIC Document Reproduction Service. A limited supply of single copies is available free from the Clearinghouse.

Instructions for obtaining copies of documents cited in the bibliography and an ERIC document order form are appended. Prices for microfiche (MF) and hard copy (HC) reproductions of the documents have been retained in the abstracts to indicate availability in each format, but the prices shown may no longer be valid. Current prices must be calculated according to the number of pages cited in each abstract and the appended price schedule.

System Manual

One phase of program evaluation in vocational education may be thought of as an appraisal of the operational procedures and the resources available if program improvement is accepted as one area of evaluation, then more attention should be given by local vocational personnel to setting objectives, identifying evidence of attain-ment, and inferring from the evidence those changes that might bring about improvement The procedures, and instruments included in this manual are theoresults of the efforts of some 500 persons, including local vocational directors, teachers, principals superintendents, supervisors, directors of socational institutes, junior college deans of instituction, teacher trainers, and state advisory council members. The manual contains self appraisal instituments and directions for evaluating adult supplementary programs, adult preparatory programs, secondary and postsecondary occupational programs, and nopose constitutions. manual are the results of the efforts of some 500 day occupational programs, and nonoccupational programs. Charts and procedures to be utilized in the followup of students in the Vocational Information Granting System Manual and the self appraisal instruments to be used are included.

This document provides a brief legislative history of the Alabama State Junior College System, beginning with the 1961 creation of a statewide junior college governing body, and culminating

with the establishment in 1973 of Chatachoochee Valley-Community College, the nineteenth school in a statewide junior college system which serviced over 40,000 students in fall 1974. The texts of several state laws applying to junior colleges are included as are many of the decisions and recommendations of the Committee on Junior recommendations of the Committee on Junior Colleges. A map of the locations of the 19 state junior colleges and 29 technical colleges and institutes is appended, as are names and addresses of the institutions. (NHM)

This study builds on a previous report, Higher Education in Alaska, commissioned by the Alaskan Legislature in 1972. Suggestions and recommendations made in that initial report and the subsequent actions taken on them make up the body of the discussion. Along with a teview of organizational and budgeting matters, of spe-cial interest is the discussion of the Alaskan community colleges, which are part of the University of Alaska system. The community colleges have emerged from university extension centers, and the philosophy of extension education is still influential in the new colleges. Although both transfer and career programs are available, funding for courses that are applicable to baccalaureate degrees is significantly easier to obtain. Occupational programs have not received as much emphasis as they need, and it seems desirable that vocational education be taken into the community college programs. Statewide planning and more specific attention by the regents is needed to make sure the community college system is organized for optimum efficiency and service.
Toward that end, certain defined limits of autonomy must be allotted to the colleges to allow them to respond quickly to local needs. (MJK)

ry Educational Opportunity Orants
This report analyzes the student aid needs inpostsecondary education in Arkansas. Data were
gathered by sending questionnaires to all the col-

and universities, vocational-technical schools, and proprietary schools in Arkansas, and to a random sample of all senior and junior students in Arkansas high schools. In addition, personal contacts were made to various student aid resource agencies, and a number of published reports and research papers were referenced The assessment of the kinds of aid received are grouped as grants, loans, employment, and scholarships The four main resources were found to be: Basic Educational Opportunity Grants, Supplementary Educational Opportunity Grants, National Defense Student Loans, and the College National Defense Student Loans, and the College Work-Study Program All postsecondary students (56,748) consumed an estimated \$20,000,000 during the 1973-74 school year. The greatest number of consumers were four-year public university and college students (18;185, using \$11,016,695) Community college students using \$11,016,695 atudent aid than any of the other groups (485 students using \$176,644). Projections of Arkansas future student aid needs are made, along with recommendations on how the made, along with recommendations on how the needs can be met Tables of data are included throughout the report, and survey instruments and complete results are appended. The report, prepared by the Academy for Edu-cational Development as part of an extensive review of California's 1959 Master Plan for Higher Education, contains recommendations for the future governance of public higher education in California Eight alternative systems of governance (including the present system) are examined in an attempt to select the one that would resolve most of the immediate problems facing higher education in the state. Fourteen criteria were formulated 80 save as a framework within which the overall analysis was made, and as the basis for appraising the advantages and disadvantages of the 8 plans. The existing public higher education system consists of 3 independent public segments (universities, colleges, and colleges), coordinated by a statewide board with primarily advisory powers. The recommended system would have 2 independent public segments, one containing all public institutions granting baccalaureate and graduate degrees (colleges and universities), and another granting (colleges and universities), and another granting only associate degrees (jumor colleges), coordinated by a statewide board it is felt that this system would, among other things, simplify the financial structure and remove arbitrary barriers to development. The, establishment of regional committees for furthering interinstitutional cooperation is also suggested, as well as advisory boards for keeping abreast of problems and needs of each 4-year campus (WM)

Descriptors ** Educational Covernance, ** Governing Boards, ** Junior Colleges, Legislation, *State Legislation Identifier - ** California

In 1967 California created a Board of Governors of the California Community Colleges to assume the responsibilities then held by the State Board of Education and the State Superintendent of Public Instruction. The law also directed the Coordinating Council for Higher Education to appoint a committee to recommend the proper functions of the new Board of Governors and of local school boards maintaining jumor colleges. By the time the Board assumed its authority in July 1968, it had arranged for the transfer of persornel and functions from the State authorities. The Education Code was examined for all sections pertaining to junior colleges at both state and local levels, so that the necessary elimination or reassignment of authority could be afternated. As these changes would require major reorganiza-tion of the entire junior college structure, the Committee recommended a study, showing alternative structures and operations, to serve as a model for the final choice and meanwhile avoid ad hoc, unwise changes It also recommended that certain conditions remain as before (instructional offerings, funding, etc.) and that some legislation, presently precluding the new Bord's authority, be changed Eighteen major functions each for the Board of Governors and the local junior college governing boards are suggested. The report shows which functions are changed, reassigned, new, or shared, Appended are the names of the Committee members and the full text of the Senate Bilt creating the Board of Governor, (HH) ad hoc, unwise changes It also recommended

California State Coordinating Council for Higher Education, Sacramento

Pub Date 4 Feb 69 Note- 105p

Descriptors— *Educational Finance, *Equaliza-tion Aid, *Financial Support, *Junior Colleges, State Aid

Identifiers - California

This report updates the January 1967 study of alifornia junior college financing, considering particularly the possibility of the state assuming all operating costs of the system. Using data not available for the earlier study, it is also examines certain new areas. Section I contains the introduction, a summary, and 12 overall recommendations. Section II, on expenditures, suggests a model with indexes to measure five factors and one for extimating and allocating state funds Section III, sources of funds, finds that state supperson III, sources of funds, finds that state support for total operating costs is not warranted Programs best served by state or local funding are discussed Section IV, funding methods, finds the existing foundation program ineffective in equalizing differences in local financial ability. Four modifications are suggested Section V, budget process, calls for systemwide review at the state level and a more timely consideration of district budgets by local boards. trict budgets by local boards, based on improved information. The system should be moved from the public school finance framework to that of higher education. Four specific changes are recommended Section VI, on equality of opportunity; suggests ways to insure that geographic and socio-economic factors do not keep potential students out, and warns against starting small col-leges that cannot offer the broad programs of parger colleges without excessive operating costs per student. Seven appendixes, with tables, figures, etc., amplify certain parts of the study (HH).

Identifiers— California
Recent California legislation now prescribes a procedure so that all territory in the state will be included in community college districts by Fall 1975 Responsibility for this procedure has been assigned to county committees on school district organization. The State Board of Governors supervises the formation of all new districts. Studies of local areas/regions will be conducted by these county committees Regults of their efforts will be submitted to the Chancellor for review, analysis. and transmittal to the Board of Governors to making his recommendations to the Board, the Chancellor is guided by a list of criteria structured around legal requirements, educational programs, and operation and administration Other guidelines are presented for use by county committees in analyzing alternative organization plans. In addition, county committees are defined and their powers, responsibilities, meeting of requirements and goals, public support role, outside assistance, and financing are discussed Varistated along with governing criteria for studies in-volving more than one county. A suggested com-mittee calendar of events for accomplishing the above is the final inclusion (AL)

. This project was directed to the development of a self-evaluation model which would enable community colleges to evaluate their effectiveness in solviding occupational education programs for the disadvantaged and handicapped that are funded under the Vocational Education Amendments of 1968. To accomplish their goal, the evaluation team made a series of visits to the campuses of four colleges, where questionnaires were used to obtain the necessary data. At the conclusion of each visit, team members met in taped sessions to review their fundings. Some of those major findings include (1) Administrators those major findings include (1) Administrators were reluctant to allow first-line personnel to be interviewed outside of their presence, (2) Administrators tended to supply first-line personnel with acceptable, answers, and (3) Similarities were found in the policies and procedures regarding programs for the disadvantaged at the participating college. Conclusions tracked were (1) The Office of Economic Opportunity needs to create a more specific definition of the term, disadvantaged, (2) Programs which serve the disadvantaged are partially acceptant. eantaged are virtually nonexistant, (3) The development of existing programs was done in absence of minority input, and (4) Community answere of infortry input, and (4) Community input regarding decisions consists of after the fact information. A handbook and supplement resulting from the project, are available as VT 018 583 and VT 018 595, respectively, in this issue (SN)

A field study to describe common characteristics of three "most successful" vocational programs in each participating northern California community college is presented. The study was divided into distinct phases. In Phase I, a procedure for identifying three "most successful" programs on each college campus was developed and implemented in Phase II, characteristics of "successful" differences. The technique used in Phase I is the Delphi technique, which is a means of structuring communication to overcome these detrimental effects of open communication Phase I began with a project planning conference whose primary objectives were to acquaint college representatives with the objectives of the study, to make necessary modifications in the plan, and to enlist local college support for the field study in all cases, agreement between Delphi panels was sufficient to identify three programs panels was sufficient to identify three programs which met the project definition of success in Phase II of the study, a questionnaire was developed and administered in a standardized interview of first-line administrative personnel of successful and other vocational education programs. Hypotheses tested were (1) Vocational programs deputies to the Deliberation of the programs of public to the programs of the first personnel of the programs. programs identified by Delphinpanels as most successful have dommon identifiable characteristics. and (2) Vocational programs identified by Delphi panels as most successful differ from "other" pro-grams in program characteristics. The essential results of the Phase II questionnaire arc shown in tabular form, (CK)

Friteen California community colleges par-

ticipated in a program designed to develop and demonstrate a training and internship model that would provide skilled, experienced project managers, especially at the levels of dean and assistant dean, for occupational education in the state's community colleges Research was conducted to produce a management system and procedures training model with resource materi als to serve as an operational guide for a continu-ing program to develop professional management skills in occupational education leaders. During the initial year of the study, 18 occupational edu-cation leaders received training in producing comprehensive system plans for accomplishing practical projects compatible with state and local priority needs Instruction was provided by a panel of university pranagement specialists and independent consultants, and emphasized product development rather than theoretical training. The consulting team focused upon system approach concepts of product development, with the participants skill development as a spin-off A continuous and objective assessment of participant tinuous and objective assessment of participant feedback reflected the program's initial success. Through data collection, it was found that the project participants rated the consultant team highly. Mariagement functions were accomplished, and the project met its objective of producing 16 skilled occupational education leaders (Author/DR) leaders (Author/DB)

Identifiers-California, COPES

An evaluation was made of the occupational education program at California community colleges. Three areas were studied: strengths, improvement needs, and research priorities. Evaluations, combining college self-appraisals with validations of the self-appraisals by visiting COPES teams, were conducted over a three-month period. Team ratings covered 60 tems Findings indicate. (1) Strengths include qualifications of occupational education instructional staff, experience of this staff, qualification of oc-cupational education coordinators, quality of instruction, and salary schedules, (2) Needs include improved college organization, increased administration commitment to occupational education, and provision of educational opportunities consistent with community needs, and (3) Research priorities include data collection, use of job success and failure information of occupational education graduates in program planning, and use of individualized instruction. A four-page COPES representative colleges outlines in detail the major strengths, critical needs and research prionties in this field (Author/CK)

The Columbia Junior College Program was started at the Youth Authority's Fricot Ranch School in May 1969, and ended with the institution's closing two years later. The program provided wards of the institution with an introduction to college, first at Fricot and later at day classes at the college campus The major elements of the program were (1) remedial, developmental, and introductory college courses, (2) rehabilitative services involving counseling, and (3) organized recreational activities. The median age of the students was 19.1 years, with 97 percent being 17-21. Of the 127 students in the program. 73 percent remained until paroled and 34 percent dropped out. Those who remained in the program completed an average of 27 quarters during their average stay of 8.8 months. They accumulated an average of 39 units. of college credits, and their median grade-point average was 3.3, with 46 percent attaining 3.0 or higher Personality tests, administered on a prepost basis, showed that gains greater than would be expected by chance were made on Self-Acceptance, Self-Esteem, and Personal Competence Scales The students' reactions to the program, as elicited by questionnaire, were largely, in the "-

favorable" very favorable" category Follow-up data revealed that 60 percent of the students continued college during their first six-months after parole, nearly two-thirds attended college four months or longer About 90 percent were involved with jobs and/or school during this period The findings suggest that the program had a rehabilitative influence and was conducive to academic achievement (DB)

ED 083 972 JC 730 268 COPES Guide: Community College Occupational Programs Evaluation System.

California Community Colleges, Sacramento Office of the Chancellor

Pub Date Aug 73 Note - 39n

EDRS Price MF-\$0.65 HC-\$3.29
Descriptors—Administrative Personnel, *Communty Colleges, Educational Planning, Evaluation Techniques, *Guides, *Program Evaluation, Program Improvement, *Vocational Education Identifiers-California, COPES

A guide designed to assist any California community college in objective self-appraisal of its occupational education programs is presented it is divided into two volumes. This volume provides the data necessary for an understanding of COPES, the procedures for its application, and time guidelines for scheduling its use COPES is an acronym for Community College Occupational Programs Evaluation System Its goal is to improve the quality and availability of occupational education in California community colleges by providing (1) easily administered procedures and instruments for studying all aspects of occupa-tional education, and (2) competent professional assistance in applying the system Simplicity and unity are characteristic of its design. In the application of COPES, there are five essentials to its success (1) involvement of the top leadership of the college, (2) careful advance planning, (3) participation of knowledgeable person's from the college, district, and community, (4) report of results to college participants, and (5) planning and action as a result of the study (For related document, see JC 730 272) (CK)

Report 2 demonstrates the extreme diversity of the new students who enrolled in the California Community Colleges in the Fall of 1972 One Community Collèges in the Fall of 1972 One-third of the group graduated from high school that same year, usually from a high school in the collège district, but two-thirds were distributed over a wide range of ages, amounts of prior col-lege experience, geographic origins, and cour-seloads attempted The diversity in their objec-tives and programs may be only inferred from the observed diversity in their personal charac-teristics. Variation in length of attendance and rates of persistence in the Community Colleges will surely be related to this diversity in objectives and programs and, indirectly, to the personal characteristics of the students. The multitude of functions performed by the Community Colleges is also reflected in the diversity of the student body Full-time programs of occupational education, general education, and transfer courses meet the needs of only a minority of the stuses meet the needs of only a minority of the students now enrolling Short-term occupational programs and part-time, one-term enrollments in specific skill courses appear to be satisfying the needs of still another large group of students. The other major category of students include adults of all ages who are pursuing a variety short-term objectives not necessarily directly related to their employment. (For related document, see JC 740 040). (Author)

Identifiers— California
Data collected in a 1973-74 survey of faculty salaries and fringe benefits for California Community Colleges are provided in three schedules:
(1) full-time faculty salary schedule, (2) distribution of salaries for full-time faculty, and (3) fringe benefits for full-time faculty and administrative personnel. The salary schedule for fulltime faculty includes the number of individuals at each step of each class Minimum standards for each salary class are described by the degrees, credentials, and additional units required, and bonuses for extra achievements are listed. The second schedule is a frequency distribution of salaries paid within specific dollar intervals. categorized for men and women in four employ ment categories, teachers, counselors, librarians, and other certified faculty. The final schedule describes fringe benefits estimated by each dis-trict to be paid spill-time faculty and administrative personnel during the current academie year Fringe benefits are defined as cash contributions in the form of supplementary or deferred compensation other than salary Definitions and other instructions used by districts to complete the salary questionnaire are contained in the appendix (Author/DB)

Identifiers—*Chartering Process
A year-long research project was conducted concerning chartering as a potential management and communications tool in vocational-occupational education... Chartering is defined as a management tool which allows two individuals in the same or related organizations, sharing different levels of the same mission, to achieve an understanding of each other's needs and capabilities by establishing a mutually helpful relationship. The process is one whereby critical issues are identified through scanning, essential parts of a critical issue are organized through mapping, agreement and validation are achieved through communication with significant others, and the performance record, value and worth of programs are reported through showing evidences of accomplishment Preliminary interviews were conducted with 51 local, State and Federal vocational occupational administrators to determine

their perceptions of the need for chartering and their perceptions of the need for chartering and the process itself Field jests of the process were then conducted with 56 high school and commu-nity college administrators. These administrators wed training in the chartering process in two workshops Through a questionnaire and followup interviews, data were gathered concerning the participants perceptions of the process Analysis of the data indicates that most participants viewed the process as beneficial to them and the time to be trained in the process as the primary cost Recommendations for future use of the process are offered (For related document, see JC 740044) (Author/KM)

This report, part three of a long-range study of persistence and performance in California's community colleges, presents rates of non-persistence for the sample of 35,000 students during 1972-73, their first year of enrollment About 18 per-cent of the new students enrolled for credit withdrew from all classes before the end of the fall term. An additional 22 percent completed the first term, but did not continue into the spring term Only 8 percent of the students who per-sisted into the spring term withdrew from all classes before the ned of their first year About 20 percent of the fall withdrawals reenrolled in the spring, and one-third of these withdrew a second time Full-time students exhibited significantly higher rates of persistence to the end of the term than part-time students Students with prior experience at another institution displayed comewhat lower-rates of persistence than first-time students, as did, the women in the sample, compared to men The representation of minority students in the groups of non-persisters was about equal to their representation in the total sample. A large portion of the students completing only one term were fairly successful academically, as measured by grades, particularly students with prior college attendance. Four tables of data are presented, (Author/NHM)

In order to determine the extent to Which the In order to determine the extens in which the California community colleges share and borrow facilities, a questionnaire was sent to each California community college in January 1974. Sixty-six (96 percent) of the 69 districts

responded. Analysis of the data revealed that the typical campus shared 7.5 facilities and borrowed 5.6. More than 37 kinds of facilities were shared. 5.6. More than 37 kinds of facilities were snared. The facilities most commonly shared were physical education facilities (gymnasiums, athletic fields, swimming pools, and stadiums); general purpose classrooms; and general use facilities (theaters, cafeterias, and libraries). The most commonly borrowed facility was the general purpose classrooms classrooms were borrowed from pose classroom, classrooms were borrowed from other school districts, public agencies, and private other school districts, public agencies, and private parties by half of the districts. Libraries, extension centers, specialized and class laboratories, and physical education facilities are also frequently borrowed. Fpr shared facilities, the range of participation includes from 47 percent to over 60 percent of the 66 districts. Slightly over 50 percent of the reporting districts borrows facilities. Data is tabulated and examples of facility sharing at 12 institutions are presented. Also included are descriptions of a telefacinile share. included are descriptions of a telefacsimile sharing project and the Learning Resource Centers network. (DC)

This report, the fourth part of a long-range study of persistence and performance in California's community colleges, deals with the per-1 formance of the 82 percent of the 35,000 students sample who entered the California community college system in fall 1972 and completed at least one term. Sixty percent of the total sample continued beyond one .term, and 22 percent completed the first term, but did not continue. The various performance measures that are analyzed in this report include course grades and other final actions (withdrawals), semester grade point averages, unit loads attempted in relation to grade point averages, and incidences of withdrawal from classes Sources of variance in performance are examined, including first-timefreshmen versus transfer, students, day versus evening students, men versus women, and persisters versus students who enrolled for only the first term Data are organized into five tables, and generally show that the records of students who discontinued after one term were not as good as those of persisters. It is possible, however, that many students who were classified as completing one term and not continuing were not attending classes at the end or failed to take final examinations, but were not recorded by the college as total withdrawals. Evaluation of the State Department of Finance enrollment projection techniques suggest they have become less accurate over time in projecting community college enrollments. In light of the continual growth of the California system, accurate enrollment projection techniques are beeded if colleges are to be effectively planned and managed. The basic system of enrollment projec-tion employed by the state, "BD-240," which applies participation rates and grade progression ratios to counts of recent high school seniors, does not take into account trends toward parttime and evening enrollments or the increasing age of enrollees Improved projection techniques should incorporate the number and character (age, sex, mobility; etc.), of service area population, local socioeconomic conditions (unemployment rate, etc.), and the changing policies of the particular college/district and nearby postsecondary institutions Preliminary analysis of the results of BD-240 estimates since 1968 suggest that they typically have underestimated total student enrollment and overestimated weekly student contact hours for day-graded activity. Four options for future projections are presented, and enrollment projections based on the BD-240 and the four options are shown through 1985 State and selected district enrollment figures are noted, and the Community College Board of Governors policy statement on enrollment projections is appended (Author/AH)

The employment of community college instruc-tors on a part-time busis provides the opportunity for students to study under outstanding instructors whose planary employment may be in indus-try or in other postsecondary institutions and per-mits colleges to respond better to community needs with the financial resources available to them. Along with these benefits, however, have come a corresponding number of problems. Although legislation in 1972 attempted to delineate provisions of law concerning the employment of certificated personnel in community colleges, it left questions with respect to the employment of temporary and part-time personnel Inappropriate or inconsistent language in existing law must be clarified in addition, opinions differ concerning the proportional benefits which parttime instructors should receive, especially in areas of tenure, salary and fringe benefits, and participation in campus affairs. Appended is an

analysis of data collected by surveying 69 Californ nia community colleges as to their employment of part-time faculty. Of the 52 districts responding.
43 employ more than half of their faculty on a part-time only basis. The average district estimate of the cost of providing pro-rata pay to part-time faculty is a 5.5 percent increase in budget expenditures for faculty salaries (Author/NHM)

This report summarizes survey data on parttime faculty utilization in California community colleges Data was received from 67 of the 69 community college districts. The primary purpose of the survey was to obtain information that would be useful to community college boards and administrators in dealing with part-time faculty legislation. Tables provide data illustrating the composition of the day division instructional staff (full-time vs part-time) by district, the composiof the evening division instructional staff (part-time vs. full-time with extra pay) by district, the sources of evening part-timers (i.e., local high schools, other colleges, non-education profes-sions, etc.) by district, the cost increases involved in converting from part-time to pro-rata pay scales, and pro-rata cost comparisons for 30, 25, and 15 hour work weeks for selected districts. Results indicate that the statewide day faculty is comprised by 79 percent full-timers and 21 percomprised by 79 percent full-timers and 21 per-ent part-timers, the ratio of full-time to part-time day faculty varies widely-eight districts re-port a ratio greater than 20/1 and 31 districts re-port a ratio less than 5/1 (Author)

This document proposes specific changes in the California Education Code which would prescribe minimum standards for the formation of public community colleges The Code regulations would define "college", require the assessment of local needs and preferences before the establishment of a new college, provide objectives for the forniution of new college programs and services, present criteria for selecting an appropriate delivery system, require districts to consider alternatives to new college construction for the delivery of the same programs and services, and recommend district identification of proposed sources of funding for both short- and long-term operations in an appended paper, a state-level role and process for community college planning is proposed. A comprehensive five-year plan is proposed to provide the basis for the Board's legislative, capital outlay, and finance programs, and for apportionment and program allocation and review administration by the Chancellor's Office. This five-year plan would be developed by a Chancellor's Office Task Force, which would be represented for analyzing all relevant information. role and process for community college planning responsible for analyzing all relevant information, identifying short-term and long-term problems, and recommending solutions and policy directions for approval by the Board. The content, time-schedule, and evaluation methods for a five-year plan are discussed (DC)

This report reviews the progress of the California Community Collèges in carrying out the intent of a recent Assembly Resolution which specified that fee structures, admission policies, and financial aid policies and programs at institutions of public postsecondary education shall not discriminate against part-time students and students choosing to combine or alternate education with other learning experiences. The first section reviews admissions requirements, concurrent high school-community college enrollments, re-entry procedures, residency requirements, and minimum course load requirements for veterans benefits and social security recipients A section on fee structure reviews the establishment and use of student fees. A review of student financial aid policies reports methods of needs determination, the eligibility of part-time students for finan-cial aid, and EOPS student course load requirements The report concludes that community colleges vary regarding the manner in which their fee structures, admission policies, and financial aid policies apply to part-time students, that community colleges attempt to be equitable in the way they meet the needs of full-time and parttime students, but that financial constraints often limit the extent to which part-time students can be served, and that a more detailed study of community college policies and procedures relating to partitime students is needed. A recent Assembly Concurrent Resolution (ACR 151) called for the Board of Governors of the California Community Colleges to prepare a plan to provide for addressing and overcoming, by 1980, ethnic, economic, and sexual under-representation in the makeup of student bodies as compared to the general composition of recent high school graduates. This document is a status report on affirmative action plans and policies in California community colleges Of 59 responding districts, 34 submitted affirmative action plans and 35 submitted affirmative action policies, 14 reported plans underway with completion pending. All 59 districts stated that they would meet the requirements of ACR 151 by 1980. Analyses of these plans and policies indicate that many need improvement, however, the number of districts with plans is encouraging. The report reviews the impact of ACR 151 and notes that its emphasis on recent high school graduates is inap-propriate; that it provides no direction as to the procedures to be used in determining economic underrepresentation; and that a single plan canunderrepresentation; and that a single pian cannot be made for 70 local districts, many of which already have their own plans Various Board resolutions, affirmative action program outlines the text of ACR 151, and a table indicating the status of affirmative action plans and policies in each responding district (Author/DC)

Methodology Identifiérs— *California

Funding for proposed community college facili-ties in California is based on a method which applies recognized space and utilization standards to expected future instructional activity as expressed by weekly student contact hours (WSCH), the product of student enrollment estimates, and expected future instructional loads Until 1974, offi-cial projections of enrollment and WSCH, were based on applying participation rates and grade progression ratios to counts of recent high school graduates. However, changing enrollment patterns and increasing participation by students of all ages have made accurate projection by this method increasingly difficult. To solve this problem, the old projection techniques have been replaced with a new age participation model which uses the entire population rather than just high school graduates as a projection base. Projected WSCH on which the 1974 bond program was based contains 17 district projections under

new technique and the remainder under the old technique The 1975 projection will be based on the new technique This document describes on the new technique This document describes in detail both the bond program projection technique and the new age participation technique, briefly describes six alternative methods of enrollment projection, and gives graphs and tables of the results of such enrollment projections. Evaluation, Program Planning, *Public Service

Evaluation, Program Planning, *Public Service Occupations, School Surveys
The document presents the first phase of a project designed to develop specific direction organization, and implementation of public truce occupational education in community colleges A consortium of 17 colleges in California was established to provide information needed to develop a master plan Four workshops were held to formulate a definition of public service education. to formulate a definition of public service education A revised classification of public service occupations is discussed in detail. Designations include (1) government, (2) public safety, correction, and judicial services, (3) educational serv vices, (4) human services, (5) health and hospital services, (6) library, media, and museum occupa-tions; (7) recreation, and (8) other public service occupations A survey of community college catalogs revealed ambiguities and inconsistencies in terminologies identifying public service occupations in specific programs. However, it showed a rapid growth in this area. The lack of a uniform terminology creates a problem in horizontal articulation. Two processes which would allow to ticulation. Two processes which would allow a student to move to different educational levels are discussed. A conceptual framework for a public service master plan is suggested based on a study of several college programs. Appended materials provide information on the participating colleges and three varying classifications of public service occupations. (Author/EC)

Identifiers—*Community College Occupational
Programs Eval Syst, COPES
The study examines the reliability of the Community College Occupational Programs Evaluation System (COPES). The COPES process is a system for evaluating program strengths and needs. A two-way test, college self-appraisal with third party validation of the self-appraisal, is utilized to assist community colleges in future institutional planning and allocation of resources. Reliability of the contract of the contr tional planning and allocation of resources. Reliability of the COPES process was tested by conducting two independent site visits at five participating colleges in California. The degree of agreement between the two groups, separately considering the same information, and following the same procedures, was examined. Ratings of the two teams on 60 evaluation items (which were based on COPES criteria statements) were compared. The test results revealed some rating imbalance due to different rating approaches and imadequate heed or misunderstanding of criteria.

A discussion of reliability test results and discernible factors affecting reliability includes

tabulated data Recommendations for improving the test are presented based on an analysis of the findings Appended are, lists of participating colleges and site visit team members, team leader survey questions and responses, and causes of major rating differences based on explanations by site visit chairmen and (Author/EC) team leaders.

cation
This is the first statewide five-year plan for the California Community Colleges. The newly adopted statement of philosophy and goals emphasizes the community college's role as a community-based institution of lifelong learning. In addition to presenting this new statement, the report details the planning process to be used in updating this plan, reviews the enrollment projections obtained from various agencies, presents a series of proposed state-level policies, and describes the district program and facility plans approved by the Board of Governors for the first year of the plan and tentatively proposed for the last four years. An examination of the master plans for the various community college districts shows that 440 new academic and vocational pro grams are scheduled for implementation during 1976-77. The largest relative growth is an ticipated in the areas of regional studies, health services, home economics, law, and public affairs and services. The appendices contain the information and documentation utilized in the development of the master plan. Included are enrollment and job opportunity/employment summary projections, extended social forecasts, and discussions of future contingencies likely to have some effect on the community college. Analyses of existing programs and district profile summa-ries complete the appendices. (JDS)

This report summarizes a longitudinal study of 32,245 students enrolled for containing the fall quarter of 1972. Patterns of enrollment for six semesters are analyzed by a number of criteria: age at the time of community college entrance, sex, part-time versus full-time status, and freshversus transfer admission. At the end of six semesters, 32 percent of the sample had persisted two or more continuous semesters, 6 percent two or more continuous semesters, 6 percent were still enrolled, 8 percent had graduated, 19 percent had enrolled for more than one term but did not persent in account. did not persist in continuous attendance, and 35 percent had enrolled for only the first term dureing the 3-year period studied. A followup study of a sample of the students who had been enrolled a sample of the students who had been enrolled for only one term is reported, and the cumulative records of grades earned by students are analyzed A section of findings about the extent to which the California community-college system is fulfilling its purposes and achieving its objectives is included, and a number of recommendations concerning community college function, student accounting, grading, reporting and analysis of student data, faculty development, and policy-making are made. Data are organized into 19 tables, and a list of participating institutions is appended (NHM)

The Colorado State Poord avects new colleges

The Colorado State Board expects new colleges The Colorado State Board expects new colleges to strive for regional accreditation as soon as possible As the Board planned, in its initial year, to grant no approval or certification, college presidents needed some kind of interim status. This report outlines the criteria for approval by the State Board for Community Colleges and Occupational Education Consistent with regional standards, they include not only published material on the college's programs, philosophy, and objectives, but also evidence of (1) involvement of staff, students, faculty, and community, (2) community, (3) staff, students, faculty, and community, (2) commitment to the open-door policy (3) on-going professional development of administration, (4) professional subject competence of teachers and in-service upgrading, (5) official encouragement of staff improvement, (6) a comprehensive curriculum including occupational, continuing, developmental, transfer, and community service programs, (7) suitable balance among the programs, (8) belief in and adequate staff for student services (counseling, financial aid, job placement, activities), (9) adequate physical facilities or firm plans to finance and build them. (10) sound fiscal management and ability to fund programs and pay attractive salaries, (11) respect for academic freedom and an open forum on controversial issues, (12) progress toward regional accreditation. Terms are defined and procedures for requesting interim approval are listed, including how to appeal a decision and request a review by the Board (HH)

This report presents data and recommendations for the development of Colorado's system of higher education. It deals primarily with the public institutions. Chapter 1 assesses the needs for higher education in the state with regard to enrollment projections, distribution of the popula-tion, availability of extension courses, and the number of students from economically and edu-cationally disadvantaged backgrounds Chapter 2 examines the size and planned growth of each state institution. Chapter 3 discusses the purposes, programs and students of community leges, state colleges, and the university system Chapter 4 examines higher education in the Denver metropolitan area, and chapter 5 explores the issues of coordination, planning and governance Tables in the appendix include data on off-campus credit extension courses, 1968-69 enrollments, and Fall 1968 Headcount enrollments in the public institutions. The Community College of Denver, the Metropolitan State College, and the Denver Center of the University of Colorado also define their roles (AF)

The term "outreach" was chosen to describe the array of efforts to provide educational opporthe array of efforts to provide educational oppor-tunities to those not now well served or not served at all by the post-secondary system Some of these, such as extension and correspondence, are well-tested approaches. Many fall into the category of non-traditional schemes as external, degree programs, universities without walls, and others yet unlabeled. The study was set up to determine how well the post-secondary and occu-pational education needs of the people of Colorado were being serviced by existing pro-

grams and how these services could be improved Problems Problems confronting institutions offering outreach and occupational programs are. (1) short-range procedures for coordination of off-campus programs during the immediate future, beginning with the 1972-73 academic year, and (2) long-range policies to serve needs over a span of a decade or more. In assessing outreach programs and opportunities the study examined the extent, and potential of various non-traditional programs, with extension being the major existing form in Colorado. Recommendations for program structures, staffing, and other needs are presented along with results of interviews and surveys and tabular data on extension enrollments (MF)

The nature of the economy in Connecticut-its changing occupational structure and trends of population growth-and the changing pattern of higher education enrollments, particularly in-creasing enrollments in technical colleges and in relatively new regional community colleges and in relatively new regional community colleges, indicate the need for increased post-high school educational opportunities. Based on an analysis of employment and enrollment trends and community ty college objectives, this report presents guidelines for the future development of the regional community college system Six models for providing college facilities and criteria for establishing new community colleges are detailed Recommendations for new, expanded, or merged facilities are based on application of the criteria to each community college district. On the basis of first-hand acquaintance of the study team with topography, existing and planned road systems. and other accessibility factors, two areas of locaare recommended, and two proposed sites for which legislation has already been enacted are discouraged. An amalgamation of technical colleges with regional community colleges is recommended Statistical studies of the present commu-nity college network, three alternative enrollment's projection estimates, and maps are included (Author/NHM)

Note-52p, Resource group 6 report, document EDRS Price MF-\$0.65 HC-\$3.29

Descriptors—Community Colleges; *Higher Edu-oation, *Master Plans, *Statewide Planning, *Transfer Policy, *Transfer Students

This document presents a report of the resource group on a transfer of students among institutions and programs for the master plan of higher education in the state of Connecticut. The group attempts to isolate a category of transfer problems, those involving graduates from transfer curricula at regional community colleges, and to demonstrate that the transfer process in the selected category can be eased substantially. The recommendations are aimed specifically at removing the current barriers that impede smooth transition from a transfer curriculum at a community college to a baccalaureate program at a 4-year institution. The recommendations cover such basic problems as the assignment of credit earned in courses, admission priorities, and the quality of student services (HS)

sonality Inventory, Spache, Diagnostic Reading Test, Wechsler Adult Intelligence Scale

This study investigated the limitation of using only achievement test batteries to identify, and place academically underprepared students, and suggests curriculum innovations to deal more adequately with the problem Ninety students at Daytona Beach and Santa Fe junior colleges provided data by completing a series of physical, psychological, and achievement tests. These students were grouped according to their per-formance on the Florida Twelfth Grade Test, an achievement test often used by state-junior colleges to determine student needs for compensatory education Collectively, these tests led to the identification of the academically unprepared students' characteristics, and indicated that based on IQ, personality profile, and socioeconomic status variations—this group of students was far from homogeneous. The significant differences in 10 (measured by the Wechsler Adult Intelligence Scale), and the similarity in range of intellect among both high and low scoring groups on the achievement test lend support to the notion that some students relegated to remedial groups do in fact have the intellectual ability to handle college work Results of the Minnesota Multiphasic Personality Inventory, however, indicate that some studes its who possess the IQ nevertheless score poorly on the achievement tests because they are to some degree emotionally disturbed Physical conditions (as determined by eye, ear, and blood tests) did not reveal differences on which to base new approaches (JO)

The social work education project is one of several statewide educational planning efforts in Florida designed to link the community college system with the University system and improve the ability of higher education to respond to the manpower needs in social work. The project developed a planning structure designed to evalu-ate curriculum development and program expansion in Florida It also delineated educational goals for the different levels of education including the community college, 4-year college, and graduate program. In addition it postulated basic components of a curriculum for all institutions of fering associate and baccalaureate degrees in the area of human services and social welfare. Work was also begun in the area of manpower utiliza-tion and human services (Author/CS)

This collection of articles on the legal aspects of the selection and retention of faculty is in-tended for department or division chairmen, described as first-level management, in communi-ty colleges. The four articles are: (1) "The Changing Role of Division/Department Chairmen: Pivotal for the Community College" by Louis W. "Bender; (2) "A Legal Framework for Faculty

Sclection, Evaluation, and Retention" by Harold H. Rastner; (3) "Legal Considerations in the Selection and Termination Stages of Employment. Challenge for Department/Division Chairmen" by Charles E. Miner, Jr., and (4) "An Inservice Training Program for Division/Department Chairmen" by Robert L. Breuder. Notes on the authors are included. (KM)

ED 085 046 JC 730 283 Planning, Programming, and Budgeting System Procedures Manual.

Florida State Dept of Education, Tallahussec. Div of Community Junior Colleges. Pub Date May 73

Note-141p

EDRS Price MF-\$0.65, HC-\$6.58

Descriptors— Community Colleges, Educational Objectives, Educational Planning, Manuals, Program Budgeting, Program Evaluation, Program Budgeting, Program Planning, Statewide Planning, 1 *Systems Development — Identifiers—Florida, *Planning Programming

Budgeting Systems, PPBS

PPBS is a system which integrates the functions of planning, programming, budgeting and evaluation The PPB System is designed so that there is a logical sequence to these functions and their ina logical sequence to these functions and their in-terrelationships are explicitly defined. The most outstanding feature of PPBS is the necessity of focusing very sharplyon what should be accom-plished by an organization. This manual includes the uniform program structure, descriptive infor-mation, procedures, and definitions which each community college in Florida will use to develop community college in Florida will use to develop its program planning and budgeting systems It also specifies the information which must be re-ported so that a comprehensive plan for the system of community colleges can be developed. The manual is intended to be used as a broad framework for the development of a college PPBS, Following an introduction defining the need for a new system, purpose of the manual, and the goals and major components of the PPBS, these topics are discussed. (1) the community college frogram structure--rationale, use, organization, coding, and two perspectives needed to plan the instruction program, (2) program descriptors diffinition and use, categories used for planning and reporting, and program descriptors used for planning and reporting, (3) the program plan and budget--purpose, the planning cycle schedule, the program budget, and the program plans, and (4) glossary of PPBS terminology. During the six-year period from 1963 to 1969, the number of community college students trans-ferring to upper division study in the state university system of Florida increased from 1,933 to 6,694. In the near future it is likely that more than half of the students enrolled in the upper division of the state universities will have a community college origin. This changing student mix at the upper division level of state universities has intensified problems of articulation, that remain unsolved. This document provides an annotation of the articulation agreement of 1971 that provides a basic framework within which students who complete programs under specified condi-tions-are assured of the acceptance of their work as they transfer to state universities in Florida The contents include definition of the associate of arts degree, responsibility for general educarequirements, pre-professional responsibility, admission to upper division programs that are competitive due to space or fiscal limitation, other associate dégrees and cer-uficates, publication of upper division require-ments; statement of lower division pre-equisite

23

requirements, standard transcript form, and experimental programs Appendices include statements regarding admission of junior college transfer students to quots controlled college, common transcript form, and task force guidelines (Author/PG)

tional Education
Vocational and technical education can provide economic mobility for individuals as well as economic development for communities. However, the literature and the results of this study indicate that the persons who could profit-most from vocational education programs, those in lower status groups, know very little about such programs A five percent sample of persons in the service area of Central Florida Community College was drawn from the telegement. lege was drawn from the telephone directory, 120 listings were chosen from each of five residential areas high-income white, middle-income white, low-income white, middle-income black, and lowincome black A telephone survey was then conducted to determine two factors (1) the number of persons in income/racial groups at each information level, in regard to vocational education programs, (2) patterns of media use within the programs, (2) patterns of media use within the income/racial groups. These media use patterns were used to design and implement an information dissemination campaign. A follow-up tion dissemination campaign a ioniow-up telephone survey showed a significant positive change in numbers of persons at the various information levels for low-income white and black groups The sum of the percentage of increase for each information eyel was 23 6 Thus, 12,500 low-income whites and blacks had increased levels of information Survey questionnaires are appended, along with sample media materials and comparative costs of media time or space. Programs
[dentifiers—Georgia
A Committee on Transfer of Credits was asked different levels by various units of the University System and to recommend at what level they should be accepted for transfer. (2) analyze lower division courses prerequisite to a bachelor's degree and, where they differed, to suggest ways to ease transfer of credit among all units. The second task resulted in development of a core curriculum, whose absence had been a great problem for the junior colleges. All units sub-mitted examples of their own transfer problems The Committee also studied catalogs, matching hypothetical cases to different requirements, and received recommendations from academic comreceived recommendations from acadenic committees Most schools were found to require courses in the humanities, natural science, mathematics, a laboratory science, social science, and introductory work in the student's major. While establishing this core curriculum, the Committee tried also to (1) preserve the school's right to its own curriculum development and experimentation and (2) allow students to change gr delay choice of their major. When the lower-division subject areas, quarterly course loads, credit hours, exceptions, provisions for revision, etc. were determined, each member unit was asked to were determined, each member unit was asked to develop its programs accordingly A committee, mostly of registrars, worked out details of implementing the new articulation procedures, including counseling students that certain 4 year programs require specialized courses at the junior college level (HH)

Identifiers-Hawaii

In 1964 the state enacted a Community College Act which established a statewide system of several community college campuses under the administration of the University of Hawaii Board of Regents. The community colleges, varying in size and program emphasis, are intended to be comprehensive in nature with a nucleus of col-lege transfer and occupational programs. This report of, a study by a consultant is to be used to establish guidelines for the development of occupational education programs Skilled manpower, suggested educational programs, occupational education curriculum, student services, administration and staffing, facilities, and finance are discussed Some of the recommendations were (1) Establish a system of copen-door comprehensive community colleges to expand educa-tional opportunity throughout the state. (2) Use high-level advisory committees at a statewide level, (3) Adopt an over-all planning scheme on a "systems analysis" approach, (4) Provide for equal emphasis on occupational education and college-parallel education and be sure each administrator is in accord with this philosophy. (5) Conduct community surveys in each county before phasing into community college operation, (6) Strive to obtain a reasonable balance between local persons and persons from the mainland in the staffs, and (7) Keep the tuition as low as possible (MM)

A study was made on the island of Oahu, Hawau, of types and levels of training being conducted by business-industry, extent of business-industry inplant programs, costs of training programs, and opinions as to expectations for public education Personal interviews were conducted in 23 large (more than 250 employees) organizations, and information was obtained from a larger sampling of "small employers" by mail questionnaire. The results of the two sample groups were generally consistent. employers" by mail questionnaire. The results of the two sample groups were generally consistent. The small employer group reported that expansion of vocational education at the high-school level as well as at the post-high-school level was significantly important as a means of helping business-industry with training. The larger employer placed greater emphasis on expansion at the post-high school level and the part-time evening programs. It is apparent that manpower development must be a cooperative undertaking involving business-industry, public education, and related government agencies, however, an apparent gulf between business-industry, and public education has not been bridged Technological developments appear to occur in business-industry more rapidly than governmental agencies are able to develop needed programs (PT) involving business-industry, public education, and

To assess the interest of Hawaiian high school To assess the interest of Hawaiian high school seniors in attending community colleges of the state, a survey was conducted in late 1967. The survey included questions about the academic and socio-economic backgrounds of seniors, their post-secondary plans, and their plans concerning community colleges in particular. Of the state's 57 public and private, high schools, 39 were represented in the study. An 82% (8,201 students) return was obtained. Of this total, 69% indicated that they planned to continue their education in the next year, 24% were uncertain, and 7% definitely were not going to school in:the cation in the next year, 24% were uncertain, and 7% definitely were not going to school in the next year Of the sensors, who planned to continue their education, 41% were interested in attending 4-year institutions in Hawaii, while 23% intended to enroll in 4-year institutions on the mainland, and 17% planned to attend community colleges in Hawaii Choices of a field of study-revealed that 71% were going into a baccalaureate degree program, 17% into business and commerce programs, and 12% into trade or technical programs. The two major types of programs indicated for enrollment were business education (35%) and college transfer (23%). (DG)

Some 1,005 eleventh-grade students in three high schools were administered the Career Choincomparison were administrated the Career incomparison of the Occupational Orientation Inventors, and the Edwards Personality Preference Schedule The responses to the questionnaire were tabulated and the distribution

of scores on the occupational attitudes and personality needs inventory were computed for each school Students were also asked to indicate the level of education which their chosen occupations would require Responses are tabulated by ethnic groups The survey showed that girls still tend to choose those careers traditionally reserved for them The girls also planned on fewer years of training and/or education than did the boys The subjects generally lacked knowledge about occupations They had little factual knowledge about the content of vocational curricula, job duties, or work conditions. They did possess some realistic information about the amount of training neces-sary for specific careers. The hypothesis that the students would tend to choose future careers consonant with their personality need was confirmed. The hypothesis that personal and experimental influences on career choices would be associated with ethnic background was not confirmed. A number of suggestions are made for improving vocational counseling at the high-school level. (IM)

This follow-up survey of Hawaii Community College vocational-technical graduates from 1968-1971 was undertaken to (1) indicate general trends in their labor force status, and (2) determine how these trends might be used to evaluate present programs. The first part of the report presents cumulative trends for 1968-1971, and the second part focuses on the 1971 class Of the total 1968-1971 population of 764 graduates, 55% responded to the questionnaire and some findings were (1) 82% of the respondents were employed; (2) mid-management merchandising respondents consistently maintained a 100% employment status, with carpentry, welding, accounting, secretarial science, and practical nursing also remaining consistently high; and (3) the drafting and apparel trades programs had low cumulative employment totals of less than 75%. Recommendations included (1) using the cluster approach for the drafting, auto body and mechanics, electronics and electricity programs, (2) re-evaluating the diesel mechanics, welding, and machine shop programs, considering the limited manpower needs, and (3) re-evaluating the nursing program considering the increasing employment rate. The 1971 graduates showed no marked changes from the cumulative trends for the total group. (RN)

With the new development in instructional techniques and styles, the quantification and description of faculty workload becomes increasingly more difficulty At the Hawauan community colleges, certain changes were made in the methodology of computing FTE for students and faculty, and average class size. They divided the total student credit hours by 15, counted division chairmen as two-thirds FTE, and excluded certain classes such as directed study in the computation of class size. This resulted in a lower FTE for students and faculty and an increase in average class

size. By comparing course registration reports, schedules of classes, and faculty-staff reports, it was determined that faculty workload has stabilized at about 164 class contact hours or 13.3 credit hours taught Generally, a lighter teaching load was noted for instructors in terms of hours and faculty-student ratio But statewide communi-ty college figures show considerable increases in all areas number of students, faculty, courses, classes, etc. Tabular data are presented, showing general FTE information as well as more detailed breakdown for each campus in terms of subject areas taught (MJK)

Identifiers—*Hawaii

Recipients of veteran benefits at community colleges in Hawaii comprised 24, percent of the spring 1975 enrollees. The proportion varied by campus from 15 percent at Kapiolani to 31 per-cent at Leeward and Kauai. Veterans differ from the student body as a whole in terms of credit load carried and educational objectives; this may be a result of the conditions upon which veteran benefits are granted: veterans must have definite educational goals and receive stipends depending upon the credit loads carried. Sixty-seven percent of the veterans, compared to 56 percent of all students, were full-time. While veteran part-time students carried heavier credit loads (7.3 cbmpared to ,6.3), full-time veteran students carried slightly lighter credit loads (13.5 compared to 14.1). The 45,826 Student Contact - Hours of the total SCH recorded for the spring semester. Ninety-five percent sought associate degrees, one percent sought certificates, and only four percent were unclassified (compared to 11 percent unclassified for the student body). Fiftypercent unclassified for the student body). Fifty-two percent of the veterans were liberal arts majors and 44 percent were vocational majors. Veterans were predominantly male, married, older, and residents of the area near the college they attended. A table of data is appended. (Author/DC) 136.

Identifiers—"Hawaii

Data gathered throughout Hawaii's six-campus community college system shows that the number community college system shows that the number of diplomas awarded during 1974-75 totaled 1.782, an increase of 13 percent over the previous year. Growth was evident in all diploma categories: Associate in Arts degrees increased 15 percent, Associate in Science degrees increased 22 percent, and Certificates increased 7 percent. Vocational degrees represented 69 percent of the total granted, ealthough vocational majors comprised only 38 percent of fall enrollment; the Associate in Arts degree accounted for another 20 sociate in Arts degree accounted for another 29 percent, although liberal arts majors comprised 49 percent of fall enrollment. The graduates were evenly distributed by sex. Included are two tables showing the number of diplomas awarded by each campus since 1970-71 and the number and types of degrees conferred during 1974-75. It is suggested that the study might be helpful in assessing the effectiveness of various programs since student persistence to completion shows wide divergence particularly when vocational and liberal arts programs are compared. Characteristics

Characteristics

This study compares the characteristics of the 3,537 Hawaii community college students who took only evening credit courses in fall 1975 with day only students and students enrolled in a mixture of day and evening courses. The evening-only student group comprised 17 percent of the only student group comprised 17 percent of the total enrollment In all three groups the majority were male, continuing students seeking a degree or certificate. Over 90 percent identified themselves as U.S. citizens and Hawain as their permanent home. However, a greater percentage of students in the evening-only group were unclassified (23 percent compared to 6 percent for both the day-only and evening-day groups). There were also proportionately fewer general and pre-professional and vocational students in the evening-only group. Most of the evening-only the evening-only group Most of the evening-only students were part-time (78 percent) In contrast, the majority of day and evening-day students were full-time (66 and 72 percent respectively). The average age of the evening student was 31.8 years, 8 years older than the day student and 5 years older than the evening-day student. This report presents data for each of the seven Hawaii community colleges, and provides comparative data for the fall 1972 and spring 1975 semesters. Tables of data are appended. (Author/NHM)

Enrollment increases in the seven colleges in

Enrollment increases in the seven colleges in the Hawaii community college system appear to have stabilized. Although enrollment increased by 1% in fall 1976 over fall 1975, some colleges reported decreases. Of the total fall 1976 enrollment of 27,829, 75% were regular students, compand of 46% pared to 66% the previous year. For the fourth consecutive year, students were taking fewer semester hours (from 11.0 in fall 1975 to 10.8 in fall 1976). For the same four-year period there has been a proportional decrease in full-time students and an increase in part-time students.

Males continued to outnumber females (55% to Mais continued to outline 25.0 years in fall 1975 to 24.7 years in fall 1976, but the modal group was the 18-19 age eategory. The proportion of continuing students increased at all but one campus, proportionately fewer (32%) new students enrolled, and the proportion of transfer students remained the same (12%) Distributions of students in liberal arts (48%) and vocational (44%) programs were similar to those reported in fall 1975. Identifiers-Hawaii

This report describes faculty teaching load for fall 1976 in the Hawaii community college system as measured in terms of average semester hours taught, average hours in contact with students, and class size. The data used in generating this report were based on students registered in regu-lar credit programs in Hawaii community colleges A general increase in the number of courses, classes, and semester hours was noted at all campuses, due in part to the greater number of courses scheduled on a modular (short-term) basis Average class size was smaller at most of the colleges Faculty teaching figures indicated: a generally heavier workload in terms of average semester hours taught by instructors compared to semester hours taught by instructors compared to 1975; a generally heavier workload in terms of weekly instructor contact hours compared to 1974; a decline in productivity ratios for the system compared to 1975; and an unchanged faculty/student ratio of 1:23 for the system. Decline in productivity ratios and average class size are attributed to lighter credit loads carried

by both full- and part-time students and the greater proportion of part-time students. Tabular data on courses, classes, semester hours, contact hours, class size by program, average semester and contact hours taught, productivity, and faculty/student ratios are included for each college and for the system. This study presents the findings of one of several studies intended to form a basis for the development of a student flow model for the Hawaii community college system. In order to discover why students, admitted for fall 1975 by a particular community college, did not enroll at that campus, a questionnaire was sent to 3,240 "no-shows." The total response rate was 66 percent. An analysis of the characteristics of the respondents showed that they were representative of the respondents showed that they were representative of the total 'no show population in terms of applicant status, program, and sex. Results indicate that over half of the respondents were actively engaged in other activities: 28 percent working, 19 percent attending other educational institupercent of the "no-shows" indicated financial reasons for not enrolling and 13 percent indicated the unavailability of the program or course desired. Data is further broken down in the report to indicate the reasons cited by respondents, by sex, by program (liberal arts or recational). vocational), and by permanent home address (State of Hawaii or U.S. Mainland), by "new" or transfer student status, and by community college applied to. Detailed data is presented in tables appended to the text. (DC)

As part of a longitudinal study of student progress through the Hawaii community colleges, a survey was designed and mailed to 1971-72 graduates three years after graduation. The questionnaire was composted of two parts: (1) a general evaluation of the community college experience: (2) detailed analysis of necreat stations. general evaluation of the community college experience; (2) detailed analysis of present activity in all, 1,354 questionnaires were mailed. Non-respondents were sent a followup letter, and telephone calls were made where possible The response rate was 34 perfent, with 466 questionnaires completed. In rating the importance of a list of 16 student gods, the respondents considered the job-oriented goals as much more important than such gods as "pleasure of learning" and "develop new interests" Respondents tended to be favorable in evaluating faculty and their and develop new interests. Respondents tended to be favorable in evaluating faculty and their educational experience, although differences between campuses were significant. As to present activities, 78 percent of the graduates were employed, 8 percent were enrolled in sphool, 8 percent were enrolled in sphool. project, o percent were enrolled in solhool, 8 percent were unemployed, 4 percent were at home, and 2 percent were saving in the military.

Detailed survey results tabulated, graphed, and analyzed, and the survey instrument is appended. A brief review of comparable studies by mainland institutions is also included. (NHM)

The Student Flow Project of the Hawaii community colleges in an ongoing longitudinal study designed to study how students progress through the community college system It complements enrollment data by providing information on noncontinuing students. This update proposes a framework for data gathering and analysis of the fall 1975 entering group over a two year period, and for the remaining reports on the fall 1974 entering students. In general, the Student Flow Pro-ject consists of three basic components (1) ad-missions, which deals with the characteristics of entering students, classifying them as applicants, admittees, registrants, and "no shows"; (2) enrollment, which provides data on students who continue to enroll in the same community college for five semesters after entry, and (3) exit, which provides data on students for each of five semesters who leave the community college either as noncontinuing students or graduates.

This document outlines the adjustes which will be necessary to complete the project, and provides a timetable of proposed activities for 1976-77 and 1977-78 Sample drafts of four survey instruments that must be administered are appended, along with a flow chart of activities. The merger of the Student Flow Project with the institutional research reports on students is planned for the near future. (NHM)

As part of a longitudinal study of student progress through the Hawaii Community College System, a survey was conducted of the 2,425 fall 1975 entering students who had discontinued their registration after one semester. The 2,425 students surveyed represented 27 percent of the 1975 entering class of 8,979. After the initial mailing and a telephone followup, 877 survey instruments were returned, a 36 percent response rate. Since an analysis showed that the respondents were representative of the total noncontinudents were representance or the total noncommu-ing population only in terms of program major, this report breaks all shalyes of data down ac-cording to field of specialization. The reason most often cited for noncontinuance was "desired class unavailable." More than half the respondents gave employment as their current activity.

and 22 percent were attending another school. Half the respondents had plans to continue their education in fall 1976. Of these, 65 percent planned to attend a Hawaii community college. and 21 percent the University of Hawaii at Manoa The goal considered important, by the highest proportion of students was to get a broad angless proportion of students was to get a proad general education. The overall ratings of the community colleges ranged from B- to C+. Data are organized into tables and graphs, and the survey instrument is appended. (NHM)

The data presented in this report supplements that contained in Report 6 of this series of reports on a longitudinal study of student progress in Hawaii community colleges. Among the findings reported in this study are (1) continuation rates for new and transfer students at the fourth semester were 42% and \$1% respectively, with a higher rate among the males than females; (2) about these fourths of several seconds. (2) about three-fourths of new and over one-half-of transfer students were full-time with a minimum load of 12 credits, (3) greater proportions of full-time students were found among vo-cational education majors than among liberal arts

majors, (4) for both new and transfer students, majors, (4) for both new and transfer students, credit-completion ratios were higher in their fourth semester than in their first, (5) females had higher graduation rates than males, (6) among the Hawan campuses. Hawan Community College had the highest graduation rate (22% for new and 31% for transfer students), (7) vocational education majors had higher graduation rates than their counterparts in liberal arts, and (8) overall, vocational education mayers tended (8) overall, vocational education mayers tended). (8) overall, vocational education majors tended to have higher continuation, credit-completion, and graduation rates than liberal arts majors. Ta-bles summarizing the data presented in the report are attached (JDS)

. This document represents one of a series of continuing reports on student flow in Hawaii community colleges. The purpose of this study was to explore the relationship of student scores on the Nelson-Denny Reading Test (NDRT) to academic performance as reflected by grade point averages (GPA) NDRT scores for 1.981 entering students at Leeward Community College in 1975 provided the data used in the study.

Analysis of student scores on the NDRT Vocabulary section revealed that highest mean scores were found among older-students, married students, graduates of mainfand high schools, liberal arts majors, students with GPA's of at least 3.5. and continuing students Analysis of student scores in the NDRT Comprehension section revealed that highest mean scores were found among females, younger students, single students, graduages of Hawaii's private schools, liberal arts majors, students with GPA's of at least 3.5, and continuing students Correlation coefficients between GPA and Vocabulary scores and between GPA and Comprehension scores were 224 and 111, respectively A correlation coeffi-cient of 664 was found between Vocabulary and Comprehension scores Results indicated that students differed significantly in performance on the total NDRT by the following characteristics sex. age, high school background, educational objective, curriculum program, grade point average, and continuing/non-continuing status (JDS)

This document analyzes the characteristics of continuing and non-continuing students in Hawaii community colleges in fall of 1976, the third

semester for the fall 1975 entering group. Analyses were made in terms of sex, age at time of entry, marital status, high school background, entry status; full/part-time status, educational objective, program, grade point average and credit completion ratio Results indicated (1) overall, the mean continuation rate was 64%, (2) significant differences in continuation rates between campuses existed, (3) males and females had identical continuation rates, (4) highest continuation rates were for those below age 19 at time of entry, (5) single students had higher continuation rates than married students, (6) new students had higher continuation rates than transfers; (7) fulltime students had higher continuation rates than part-timers (8) those seeking A S degrees and technology students had higher rates than those not in these categories. (9)-students with grade point averages from 2.0 to 3.4 had higher continuation rates than other students, and (10) students with the highest credit-completion ratios. had higher continuation rates than those with the lowest credit-completion ratios. Statistically significant differences in continuation rates were found for all characteristics studied except sex (Author/JDS)

A questionnaire was sent to 2,045 students who had entered Hawaii community colleges in fall 1975, continued their enrollment in spring 1976, but who did not enroll in fall 1976 for a third semester The purpose of the questionnaire was to obtain data on reasons for non-continuance, to obtain information on the fall 1976 activities of non-continuing students and on their future educational plans, and to provide non-continuing students with an opportunity to evaluate their com-munity college experience. A total response rate of 43% was achieved Results of data analysis indicated (1) major reasons for non-continuance were transfer to another college (24%), work preference (15%), and desired classes unavailable (15%), (2) 56% of the respondents were working in fall 1976 while 27% were attending another school, (3) 50% indicated plans to continue their education in spring 1977 and 13% planned to continue at a later time; and (4) the best average ratings of characteristics of the college experience were for friendship with other students and for instruction while the located to the continue at a second and for instruction, while the lowest rating was for the variety of courses, available. Tabular data are presented throughout the report. Additionally, data are analyzed according to institution, non-continuing student demographic characteristics, and type of educational program. (JDS)

In order to study the relationship between students educational plans and deeds, questionnaires were administered in spring 1976 to two groups of University of Hawaii (UH) community college students who entered in fall 1975, continuing students with their second community. tinuing students in their second semester at Hawaii, Honolulu, Maui, and Windward community colleges, and non-continuing students who left after one semester of enrollment at any one of the seven community colleges Of 2,104 continuing students surveyed, 92% (1,926) had educational plans for fall 1976, almost all (1,870) planned to attend a UH campus Of those with UH plans, 69% enrolled in fall 1976 as planned, 8% enrolled at a different UH campus than originally planned, and 23% did not enroll. Higher proportions of males, students below 19 years at entry, students in technology, and students with grade point averages of 3 0 to 3 4 actually enrolled as planned Of those continuing students with no educational plans, over half returned to a UH campus in fall 1976 Of 877 non-continuing students, 430 (49%) had educational plans for fall 1976 and 321 planned to attend a UH campus Of those with UH plans, 46% enrolled as planned, 5% enrolled at another campus, and 49% did not enroll. Differences between pus, and 49% did not enroll Differences between educational plans and actual enrollment were analyzed according to five student characteristics: sex, age, program, cumulative grade point average, and entry status. Identifiers-Illinois

The purpose of this report is to outline recommendations for submission to the Illinois Board of Higher Education on the preparation of junior college teachets. Ways in which Illinois' universities could alleviate the shortage and improve the quality of junior college teachers are suggested. The report is organized into two parts, consisting of the preparation of instructors (1) in liberal arts and general education areas, and (2) in technical and general education areas, and (2) in technical subjects. Part one recommends upgrading the present master's degree programs, establishing new programs, and designing new doctoral programs-specifically for the junior college area. Part two focuses on the preparation of teachers of technical subjects, indicating the need for vocational-technical teachers and recommending a curriculum and programs that would meet this need (BB)

The Illinois Junior College Board's role, standards, and guidelines, and those of the Illinois public junior colleges are outlined in three parts. The first (Philosophy, Roles, Relationships) deals with the role of the state board and its relation-ships to local boards and other state boards. The state board provides leadership in various activities relating to the development of the state system of junior colleges. The second (Standards and Criteria) discusses the legal basis for evaluation, administration, curriculum, instruction, and student personnel services. The third (State Board Policies, Procedures, and Guidelines) considers policies relating to programs, reimburse-ment and recognition, and facilities development

Identifiers—Illinois

This cost differential study was designed to use data collected-by the Division of Vocational and Technical Education and the Illinois Junior College Board in an effort to analyze differential program costs of selected occupational curricula in gram costs of selected occupational curricula in six sample community colleges incurred in the fiscal year 1968-69. To be effective, a cost according system must be developed one year in advange, of planned use. The objectives of the educational system and specific institutions, as well as the nature of the instructional program, provide a framework within which all cost analysis must be conducted and interpreted. The most significant variable affecting the cost per student-hour, the course cost, and the program cost is the size of enfollment in individual classes. This study has also (1) stressed the need of the Division of Vocational and Technical Education for accurate cost data. (2) pointed out some limitations of the Unit Cost Study conducted by the Illinois Junior College Board, (3) described some of the problem areas and weaknesses of methods used to allocate costs, and (4) provided recommenda-tions implementing an accurate program cost identification system (CA)

This document presents tables and figures relating to all aspects of the community college program on all 46 campuses in Illinois as of fall 1970 Officers and members of all local boards of trustees are listed. Enrollments are broken down into full-time and part-time; day and evening; freshman, sophomore, and unclassified; credit, credit equivalency, and nonapportionment; and "in-district" and "out-of-district" students. Rank in high school graduating class of entering freshmen and academic standing of transfer students are tabulated. Faculty are described in terms of full-time or part-time; classification, academic preparation, previous experience, and teaching load. Educational programs are characterized by the number of approved programs, headcounts. and credit hours taught in each of five broad program categories. Library resources are described by the number of volumes held, the percentage of holdings in each subject area, and the availability of library and other learning resources. Financial of horary and other learning resources, rinancial resources and expenditures are detailed, and site and facilities characteristics and utilizations are presented. Academic calendars for all campuses are summarized. (DC)

This benefit-cost analysis of occupational-vocational training offered at five selected innor col-

tional training offered at five selected junior colleges il illinois compares the economic benefits of occupational vocational training (primarily income) to the economic costs of such training come) to the economic costs of such training Both the view of the private individual and the view of society are taken. The results indicate that occupational vocational training is. (1) a profitable investment for the typical student, given his or her usual alternatives, (2) a profitable investment for society, particularly when compared to conventional college transfer programs in community colleges, and (3) apparently less profitable an investment in Illinois than nationwide. The term "profitable" investment as used here means that the rate of return on whatever money and resources that have been inever money and resources that have been invested is greater than the rate of return that is realized on typical investments elsewhere in edu-cation and an society, e.g., the rate of return on college education or the rate of return on a corporate bond. A survey was made of Illinois Vocational educa-

cation personnel in six high schools, six area vocational centers, and three junior colleges to review the qualifications, needs, difficulties, and working conditions of vocational education personnel and to assess ways in which other educational agencies might, assist in upgrading the qualifications of vocational education personnel in occupational programs. Data were collected using two questionnaires. One questionnaire, which was completed by each school's vocational education director, sought information about cer-tification, length of tenure, teaching, counseling, administrative, and service responsibilities, while the second questionnaire, which was completed by teachers, counselors, and directors, yielded in-formation on educational background, occupational experience, education and guidance cour ses, and needs and difficulties encountered in acquiring additional credit in occupational ex-perience. Usable return from 339 of the 359 respondents revealed that (1) Traditional salary schedules were not constructed to reward productivity, (2) Occupational experience was viewed by administrators as being extremely important for an occupational teacher, (3) There was a trend for the high school to look to the area vocational center to assume much of the area vocational center to assume much of the responsibility of providing occupational training, and (4) The vocational education personnel were mainly interested in vocational guidance, curriculum building, and technical courses (SB)

Classroom Communication, Community Colleges, *Deaf Education, Deaf Research, *Educational Needs, Educa-tional Programs, *Educational Resources, Full State Funding, Interviews, Job Skills, Question-naires, *Vocational Education Identifiers-* Illinois

This reportiwas designed mainly to develop in-formation on the need and available resources for providing adult education programs for the hearing-impaired population of Illinois Information was gathered through questionnaires mailed to

persons identified through the records of the National Census of the Deaf, and follow-up interviews on a 200-case sample of respondents to the mail questionnaire. Questionnaires were sent to 4,300 and returned by 1,200 hearing-impaired persons about 7 percent of the estimated total of such persons in the State. The survey indicated that about 75 percent of the respondents were in terested in resuming educational activities, largely in basic education and upgrading of vocational skills. They also indicated an overwhelming preference for direct supportive communication in the classroom. The community college system in Illinois was rated an ideal one for delivery of adult education services to hearing-impaired persons in meaningfully-structured programs. Site visits to about one-third of these colleges established the acceptance of their directors of that principle The report therefore included a recommendation for establishment of a State fund to finance special supportive services by community colleges and certain other educational institutions for that purpose (Author/EA)

A project to evaluate and study student development programs in all community colleges in Illinois is discussed. The project included a number of individual studies on various aspects of student development programs. The major study focused on the scope and quality of student development programs as perceived by students, faculty, and student development staffs. Other studies focused on exceptional practices, student involvement in governance, and the perception of student development programs by key administrators The exceptional practices in the student development programs relate to academic sup-port services, academic uplift services, admissions and records, college organization, community services, counseling, evaluation, experimental colleges, financial aids and placement, human potential groups, orientation, and etudent activities. Two appendixes provide a list of the interviewers and community colleges interviewed and a memorandum related to the-Interviewer Project

The Unit Cost Study is an annual project in-volving the direct participation of all public com-munity colleges in Illinois. Each college provides basic data on course offerings, enrollments, and

costs in each instructional area to the Illinois Community College Board, which checks the data for consistency with apportionment claims and financial audits, then compiles the reports via a computer program. The effective implementa-tion of the Uniform Accounting Manual by the colleges establishes reasonable continuity between classifications. The community colleges furnish data on midterm enrollments, course credits in semester hours, direct costs for instruction, and other departmental costs. Indirect costs are reported in total dollar amounts which are all are reported in total dollar amounts which are allocated to each instructional area on the basis of the proportion of course ecedit hours generated in the given area to the total credit fours generated by the college. The bulk of this coport is made up of reorganizations of the data to those various interrelationships. The study is designed to provide information necessary to planning, evaluation, and management. In addition, the evaluation, and management In addition, the study is an accountability report to the citizens of Illinois and to the citizens of each community college district. (Author/NHM)

The purpose of the study was to conduct a survey of all the public community colleges in Illinois to evaluate how the colleges develop and approve vocational technical education programs Objectives included evaluation of the criteria used in selection and approval of programs, getting information to improve management processes used in selecting the vocational programs offered, and determining how auccessfully the community colleges were providing post-secondary occupational education opportunities. Surveys were conducted through mailed question-naires and by on-site visits. Evaluators with expertise in both occupational education and the IIlinois community college system developed and mailed previsit survey instruments to each community college president. The resulting data were tabulated for manpower demand, atudent interest, program duplication, and program costs. The

This document costs

dations for Illinois public community colleges and the Illinois Community College Board for fiscal year (FY) 1978, reviews the funding history and problems of Illinois community colleges and provides a statement of need for the FY 1978 budget vides a statement of need for the FY 1978 budget request totalling \$132.196,218. This figure compares to the FY 1,277 budget appropriation of \$108,802,000, although \$117.111,500 had been recommended by the Illinois Community College Board It is noted that in the three-year period of FY 1974-1977, state credit-hour grant support per student has decreased more than 8% while inflation. flation has increased by nearly 25%. Consequently, the bulk of the recommended increase over the 1977 budget is for credit-hour grants. with a rate of \$20.80 recommended as the base rate for the average credit-hour grant This budget recommendation is intended to prevent further program closures, tuition increas deterioration of educational quality. Tabular and graphic data are included throughout and provide information on state appropriations by budget item and apportionment rates FY 1966-1977, anticipated revenues by source and per credit hour for FY 1978, unit costs by college and instruc-tional program area for FY 1976, annual apportionment FTE enrollment by funding category for FY 1976, assessed valuations and estimated tax collection losses, and equalization funding Overall, costs for operation of the Illinois community colleges for FY 1978 are projected at \$299.675,000 for 185,500 FTE atudents at \$53 87 per credit hour. As art of the effort of the Illinois Community college Board to develop and implement state-wide and regional planning of occupational programs, input from community college administrators, presidents, and trustees was sought in order that policies, procedures and guidelines for statewide and regional planning could be formulated. Additionally, occupational programs currently offered and those intended for future implementafered and those intended for future implementa-tion were classified as to whether they should be made available on district-wide, area-wide, re-gional, statewide, or cooperative bases. The resulting occupational program classification acheme was then presented to community college personnel at seven regional meetings throughout the state The bulk of this document contains the instructional program classifications for each of the seven regions of the state Within the regional program classifications are the instructional program classifications for each college in the region Procedures for resolving disagreements on program classification and duplication between institutions at the local level are outlined, and the role of the State Board in assisting the resolution of differences is also presented. The educational plans for the Illinois community college system presented in this document were developed by the Illinois Community College Board in conjunction with the state community colleges. Six major sections - planning at the state level, enrollment projections, educational program planning, personnel requirements, finance, and community college outcomes--constitute the bulk of this master plan Overall, the master plan shows that the Illinois community college system will continue to grow and expand during the next five years. Student enrollments are projected to increase but at a slower rate than in previous years. The number of educational programs will continue to increase in the occupational/career areas and change somewhat in other publishers. in other areas. Building programs at most of the colleges are expected to be essentially completed during the next five years and operating expenditures are expected to increase. Additionally, although stabilizing enrollments will decrease the funding problem at the state level, the community polleges will have increased financial needs due to inflation and limited tax revenue Extensive statistical data relating to each of the individual areas of the master plan are included throughout the document. College Board
The first statewide followup Study of occupational/career education students in Illinois community Colleges was developed through the efforts of the Illinois Community College Board (ICCB) Research Advisory Council and the special Occupational Followup Subcommittee The Phase I data for the followup study consisted of reporting student characteristics Participation in the followup study consisted of all 38 community colleges involving 27,663 students. The preliminary data for Phase I of the study were reported by each of the Illinois public community colleges and based on the number of new fall 1974 students in the eccupational/career program. The reports classified these students by their curricudents in the occupational/career program. The reports classified these students by their curriculum, type of attendance (45.3 percent full-time, 54.7 spercent part time), sex (49.7 percent male, 50.3 percent female), and griginal intent for enrolling at the college (56.2 percent preparation). for employment in career areas, 21 2 percent skill improvement). The preliminary report shows that although there are slight differences between the original intent of male and female students, sig-nificant differences occur between full-time and part-time students. It is concluded that followup data will be needed and can be accomplished through proposed phases 2 (withdrawal analysis) and 3 (followup and employer surveys) Ap-pended materials include sample report forms and a standardized survey instrument (BP)

The present affectiveness and future direction of monetary award programs administered by the Illinois State Scholarship Commission is examined in three surveys A random sample of 1,000 was drawn from the total sumber of scholarship recipients during the 1967-68 and 1970-71 academic years; 2,000 from the 1973-74 survey it is shown that: (1) scholarship respondents were divided about evenly between men and women, with slightly more men in the grant respondent groups; (2) the grant group includes substantially more commuters (54 percent) than the scholar-ship group, which is related to the greater percentage of grant respondents enrolled in public two-year colleges, (3) both scholarship and grant group distributions are skewed toward the freshman and sophomore levels; and (4) decreasing

percentages of grant respondens attend privata four-year colleges over the period studied, with a shift from private four-year colleges to public two-year colleges. The distribution is more stable for scholarship respondents. These findings are discussed in terms of the impact of awards on access and choice of college, theory and reality of financing a college education, opinions and at-titudes toward financial aid. The finding can also be applied to operational decisions regarding stu-dent [imancial aid administration and policies (LBH)

This document contains a summary descriptive analysis of a sample of 19,716 students who took the ACT test (American College Testing Program) and were enrolled in the public community colleges of Illinois during the fall 1975 term. The sample of students represented 1 to of the total freshman enrollment and 20% of the full-time freshman enrollment in the public community

colleges Data indicated. (1) the ACT composite score for Illinois public community college freshmen was 17.3 and their average high school grade point average (GPA) was 26, (2) the public college freshmen had lower ACT scores and GPA's when compared to all Illinois collegebound students and as compared to national norms, (3) 50% of the students indicated they planned to apply for financial assistance and 56% anticipated working while in college, (4) 32% planned to obtain a two-year degree, 7% aspired to a less than two-year certificate, and 56% aspired to a bachelor's degree, (5) health and business and commerce professions were tied in popularity as the first vocational choice (18%) of community college freshmen, and (6) "field of study" was cited by 47% of the students as the single most important factor in making their college choice, while 22% cited tuition cost as the most important factor Sixteen tables of data presented throughout the report reflect analyses of selected student characteristics (JDS)

This document Exports a follow-up study of 10,504 students who transferred in fall 1973 from Illinois community colleges to Illinois senior in-

Illinois community colleges to Illinois senior institutions, in order to identify patterns of mobility by both sending community colleges and receiving senior institutions, and to study the pre- and post-transfer characteristics and achievement of these students Data are compared to the findings of a similar study of the transfer population of fall 1967. The performance of the transfer students was measured by three criteria persistence of the students at the senior college, academic status, and gradepoint average (GPA) The study shows that the large majority of transfers con-78% of those whose academic status was known were in clear or good standing. At the end of the spring 1974 term, the mean GPA of transfer students was 2 65, only .15 lower than the mean pre-transfer GPA. (NHM)

Identifiers-Illinois

The Illinois Community College Board (ICCB)
Faculty and Staff Utilization subsystem, a component of the ICCB management information system, was designed to produce meaningful and useful information reports for the analysis of faculty and staff, as a resource, in Illinois communty colleges. Accommodating the complex nature of staffing at the 49 Illinois community colleges, the subsystem enables proration of salaries, provides basic salary allocation for unit cost stuprovides basic salary allocation for unit cost study, can accurately calculate outputs per annual faculty FTE, and when interfaced with course enrollment data, produces a number of faculty productivity reports showing a profile of student course enrollment, course contact hours, student contact hours, course credit hours, and student contact hours. Additionally, the subsystem credit hours Additionally, the subsystem generates faculty productivity information for-purposes of comparison between institutions, while providing individual campuses with information critical to analysis of local operations Sample output and several charts are included in the report to illustrate basic design principles of the subsystem (Author/JDS)

This report presents statistical data for all lilinois public and private two-year and four-year colleges and universities extracted from the Fall 1975 Space Survey completed by the Illinois Board of Higher Education Summary data by institution and totals and weighted means for types of institutions are provided on building efficiency (net assignable square feet compared to gross square feet), average weekly usage for classrooms and laboratories, distribution of space by type of room, and net assignable square footage per on-campus FTE (full-time equivalent) student The data show that college buildings within the public community college system had a relatively high ratio of usable space to gross space when com-pared to other types of institutions. Although the public community colleges did not rank first. among other institutions on measures of day utilization, when evening utilization rates were utilization, when evening utilization rates were combined with day utilization rates the public community colleges ranked first in average weekly room hours of utilization for classrooms (30 5 hours) and laboratories (26 9 hours), and student station utilization rate for classrooms student station utilization rate for classrooms (27.1%) and laboratories (23.8%) Analysis of net assignable square feet (NASF) shows that the community colleges had 11.0 NASF for classroom space and 17.3 NASF for laboratory apace per on-campus student FTE. Cost Analysis of Selected Educational Programs in the Area Schools of Iowa.

lowa State Univ of Science and Technology,

Spons Agency—Iowa State Dept of Public Instruction, Des Moines, Div of Vocational Education Pub Date 68

EDRS Price MF-\$0.25 HC-\$1.25

Descriptors—Area Vocational Schools, Commuty Colleges, Comparative Analysis, Educational Finance, *Expenditure Per Student, *General Education, *Post Secondary Education, *Program Costs, Technical Education, *Vocational Education Identifiers—*Iowa

To determine relationships between the current-unit-cost-per-student contact hours for postsecondary arts and science transfer curricula and selected vocational-technical programs, the area schools of lowa were visited personally by the investigator and data collected from the financial records of the institutions. The cost of each specialized vocational-technical curriculum was compared to the mean cost of educating a student in the arts and science transfer curricula Some major conclusions resulting from analysis of the 1967-68 data were (1) Enrollment had the greatest degree of inverse relationship with stu-dent cost, (2) Administrative and plant operation expense were contributing factors to differences between schools in student costs, (3) Instructonal expense was related to enrollment and stu-dent costs. (4) Rental of buildings on some cam-puses increased costs, (5) The vocational-technical programs were more expensive than were the arts and science transfer curricula, and (6) Adequate financing is necessary for junior colleges considering vocational-technical programs (DM)

This report is a history of lowa's post-secondary education, outlining various studies, legislation, and possible restructuring of provisions of the ex-isting lowa Code that might lead to a combina-tion of 2-year junior college education and area vocational education into a single comprehensive institution. The final pattern, however, was the establishment of a system of area community colleges and area vocational colleges Particulars of their organization, governance, and funding are given By July 1966, all 99 counties had worked on a study or plan for developing a vocational or community college. Of the 13 resulting area schools, four became area vocational schools and ine, area community colleges. The 13 areas took in 83 counties. Work had also begun on incorporating the existing 16 public community junior colleges into an organized area school administration Cyrrently there are 11 area community col-leges and four vocational schools. At date of writ-Seven counties were still unorganized, unasing, seven counties were still unorganized, unas-similated, or unspecified for vocational or com-munity function. The concept of area schools has permitted such great expansion of post-high school vocational/technical and adult education programs that 1967-68 enrollment in the system exceeded 80,000. Certain issues, remained unresolved, such as certification, accreditation, and the training of adequate staff. (HH)

Descriptors-*Area Vocational Schools, Career Planning, Community Colleges, *Comparative Analysis, *Educational Needs, *Educational Status Comparison, Interviews, Labor Force, Occupational Information, Post Secondary Education, School Organization, Education, Vocational Education

Interviews, involving approximately 275 in-dividuals, were conducted to analyze vocational education and community colleges in the State of lows. In addition, a limited survey was made of career education programs in secondary schools. The findings indicate that the area schools are open to all lowans of post-high school age, that the students tend to come from families of modest income and are dependent upon part-time work, scholarships, and loans, and that some career education programs should be phased out Recommendations covered the six areas of students and student services, curriculums and programs, professional staff, administrative organization, physical facilities, and finance. Three of the 46 specific recommendations were. (1) The state should concentrate on recruiting individuals who could best profit from vocational and technical education, (2) An overall master plan for all of lows education should be developed, and (3) The community colleges should be administered under state guidelines developed specifically for them (GEB)

This guide is designed to be used for accrediting junior colleges in Kansas and for periodic institutional self-evaluation

The standards delineated cover public community junior col-leges, church-related two-year institutions, private junior colleges, and technical institutes. This guide cites the general state requirement for a given aspect of junior college organization, and then describes the specific criteria the accrediting committee uses to evaluate the degree of an in-stitution's compliance with that general require ment Requirements described include. (1) junior college philosophy and statement of purpose; (2) organization and administration, including administrative personnel, general physical facilities, and recordkeeping; (3) student personnel services, including admissions, credit, graduation requirements, counciling housing admissions. requirements, counseling, housing, scholarships, health, placement, and followup, (4) curriculum, including university parallel, general education, vocational and technical, adult education, and summer sessions; (5) instruction, including the

library, course outlines and objectives, instruction materials and equipment, teaching methods, and evaluation; and (6) the general college at-mosphere. (NHM)

Public higher education in Kentucky has ex-panded in the last decade from 1 doctoral level university and 5 colleges serving 28,224 students into a system of 2 doctoral level universities, 4 regional universities, 2 4-year colleges and 14 community college campuses serving 80,000 students. This document provides data related to in-stitutional growth and development expectations through 1976. The purpose of the report is to

reflect program priorities as established by the in-dividual institutions to meet the changing higher education needs in Kentucky. Six questions were submitted to the colleges and universities in the state system to form a basis for reporting institu-tional plans for the 4-year period 1972-76 regard-ing (1) projected enrollment figures; (2) changes in educational program structure; (3) program evaluation criteria; (4) program development prioraties with proposed timetables for implementa-ion; (5) projected needed educational resources, and (6) plans and procedures for program development. This booklet is intended to acquaint faculty and staff members with general information about the University of Kentucky community College System, and to explain some of its policies affecting them. The booklet is organized into five sections. Section 1 contains general information about the system, gives its history, purpose, and a map of the locations of the 13 campuses. Section Il discusses the organizational structure of the system, including the administrative hierarchy, and various assemblies and divisions. Section III gives rules and regulations in such areas as equal opportunity, advanced work, term of appointment, faculty load, academic ranks, promotion. tenure, performance review, appeals, nepotism, leaves of absence, vacation, sick leave, and office hours. Section IV gives specific information as to paydays, deductions, official travel, admission to athletic contests, identification cards, absences in special circumstances, and political candidacy. Section V lists benefits, including life and health insurance, workman's compensation, unemployment compensation, retirement programs, official university holidays, and maternity leave. This booklet could be of use as a model for policy makers at other institutions. (NHM)

This document summarizes the rights and responsibilities of students in the University of Kentucky community college system. Part I deals with rules and procedures governing non-academic relationships between students and the University. The discussion is organized into five articles which have been adopted by the University Board of Trustees and may be amended only by that body: (1) the community college judicial system; (2) the rights of students, including udmission, financial aid, facility use, privacy, the keeping of records, free expression, and free press; (3) the community college's supervisorial role over student organizations; (4) financial delinquency; (5) interference, coercion, and disruption. Part II deals with rules governing academic relationship, as adopted by the Community College Senate. In this part, the academic rights of students, and possible academic offenses (plagiarism, cheating) are discussed, along with procedures to be followed in the case of an academic offense or a breach of academic rights. Finally, this document discusses honor codes, and the composition of the Community College Appeals Board. (NHM)

Descriptors—Community Colleges, *Cooperative Education, Cooperative Programs, Educational Objectives, *Junior Colleges, *Program Administration, Program Evaluation, Program Planning, *School Policy, *Work Experience

Identifiers-Kentucky

The primary objective of cooperative education is to provide students with planned and evaluated work experiences which will enhance the integration of theory learned in the classroom. Secondary objectives include learning how to work, selecting appropriate earer goals, and broadening and deepening humanistic learning. This position paper describes recommended planning, development, implementation, and evaluation procedures for cooperative education programs. Among the planning procedures described are surveying for market suitability, identifying the service ares and amount of student interest, and determining sources of financial support. Two organizational patterns for program administration are described, and the roles of the coordinator, the instructor, the division chairman, the employer, the student, and the advisory committeeare outlined. Procedural recommendations for the evaluation of students, the work station, and the program are made. Finally, specific suggestions for program operation in the areas of credit, grades, student load, student qualifications, levels of experience, and record keeping are provided. (NHM)

This two-part project was initiated to develop guidelines for the physical facilities required to meet the needs of Maine for higher education at less-than-baccalaureate levels. Part I evaluates the social, economic, and educational needs for general, technical, and occupational training and education Existing institutions are currently working at near capacity even though student damand is low Demand is increasing as Maine's economic base requires more technically trained personnel. This study assesses current facilities and examines the approaches taken by other New England states to determine how best to facilitate new programs. Off-campus locations, temporally facilities, space shared with established institu-tions, and educational TY and radio should all be exploited until enough data from student response can be gathered to indicate the most valuable locations for permanent construction. The second part of this report presents detailed information on the occupational opportunities becoming available, including educational and training requirements for certain jobs. The six vocational-technical institutions are listed with per-tinent data, and the surveys completed by each vocational center are appended (MJK)

This study was commissioned to provide data related to program and facility needs of the community college proposed in the Lewiston-Auburn area A brief history of the two-year college movement in general, and in Maine in particular, is followed by descriptions of three area surveys. The High School Survey of 2,246 junior and senior year saidents at seven local high schools found that 45 percent of the 1,486 students in tending to continue education beyond high school would prefer to attend a low-cost local two-year college if one were available. Thirty-nine percent of the 662 students not intending to continue beyond high school indicated they would change their minds about continuing their schooling if a low-cost local community college were available. The industrial Survey of 23 local businesses and industries found that approximately 10 percent of those presently employed needed their skills upgraded and that between 1972 and 1975 an addibonal 4,356 employees will be needed to fill anticipated vacancies and new positions. The Model Cities Survey found that higher wages and more jobs were the most important factors needed to improve area living conditions. Community suggestions and present area educational opportuni-ties were recorded, and a report of existing and needed facilities, along with a report of potential building costs, is included (DC)

The rapiert presents the findings of a study conducted to determine priority areas for research in vocational-technical education in Maine for 1975-77 as perceived by practitioners. A list of vocational education research areas was developed as a survey questionnaire and administered to 244 professional staff members of the seven postsecondary vocational-technical institutions in the State. One hundred and forty-nine (61%) were returned. Responses were analyzed question-by-question for each of five areas needs for vocational education, curriculum development, instructional learning processes. development, instructional learning processes, student development and needs, and administration of vocational education. The responses are first reported by question according to institution, and following that, the highest priority responses for each of the five areas are reported, reflecting the following concerns labor market requirements, assessment of educational needs of 16-18 year olds, development of new programs from emerging technologies, relating preparation com-petencies to job entry, development of mul petencies to go entry, development of mu-timedia instructional approaches, vocational counseling and followup, provision for advanced placement; and exploration of the role of the vocational, technical, and adult education system within postsecondary education A sample questionnaire is appended to the report (Author/NJ)

Guidelines for evaluating postsecondary career education programs in Maryland are provided. The basis for the evaluation system self-study The basis for the evaluation system self-study design is a model developed by Malcolm Provus and described in "Educational Evaluation: New Roles, New Means, The Sixty-eight Yearbook of the National Society for the Study of Education, Part II." The chapters of guide are I. Program Evaluation, II. Organizing the Self-Study Team (Level II), III. Phase I Program Objective Evaluation (Level II), IV. Phase II Educational Process Evaluation (Level II); V. Phase III Installation Evaluation (Level II); and VII. Phase V Evaluation of the Cost Benefits (Level II). In addition tion of the Cost Benefits (Level II). In addition, appendixes present. A. SBCC Program Proposal-Manual, B. Student Placement Questionnaire, C. Manual, B. Student Placement Questionnaire, C. Graduate Follow-up Questionnaire; D. Long-Range Follow-up Questionnaire; and E. Employer Rating of Students The board members of the Maryland State Board for Community Colleges and of the Maryland State Board of Education are listed. (DB)

This report explores some techniques that
could assist educational managers in their attempts to arrive at more optimal input and output mixes. Following a review of the literature on input-output analyses in education and a description of the Pennsylvania Educational Quality Asdy), an empirical analysis utilizing single and simultaneous equation systems was conducted Because the regression coefficients indicate the expected change in any one output, reflective of changes in one or more inputs but not in the changes in one or more inputs but not in the overall level of educational output, output indexes based on the canonical correlation technique are presented. The analysis supports the contention that some reallocation of resources could enhance the outputs of the educational system. A strong argument is made in a favor of the development of a simultaneous-equation system. The canonical correlation technique was found to be useful in developing an overall output index. Although the output indexes are not very sensitive to changes in the output set, they are sensitive to changes in the input set (Author).

The Maryland State Board for Community Colleges. in conjunction with the sixteen public com-munity colleges of Maryland, has completed the first Statewide Student Follow-up Study Conceptually, the study was designed to investigate five areas (1) student academic and demographic characteristics, (2) student goals or primary reasons for attending community college; (3) student transfer experiences and performance at other postecondary institutions, and (5) student perceptions of community college-environment and services. This data is broken down into several categories and crosstabulated where appropriate Because only 30% of the questionnaires were completed and returned, the study is constrained and limited to the respondents, it dannot be generalized to the entire study population. The study will be improved and will be continued on an annual basis for the part, two weets after an annual basis for the next two years, after which time, it will be conducted on a cyclical time frame. The questionnaire is appended (DC)

Needs' Assessment

The Maryland State Board for Community Colleges is conducting a study of the needs for poss-secondary vocational-technical education on the Lower Eastern Shore of the state This document represents an interim report on the progress of the study Procedures included analyzing existing manpower and student interest data, verifying this information with local employment offices and employers in the four counties of the area, consulting with a Steering Committee of area residents, and administering a questionnaire survey to determine the interests of local individuals in enrolling in specific programs. Specific recommendations are made as to the types of programs needed and the curricula to be included in each The author recommends the establishment of Lower Shore Community College (LSCC). a community college without walls community college without walls hich would utilize existing facilities in the area The college would be vocational-technical in its orientation Services would be provided on a contract basis by existing institutions and LSCC would have coordinating and administrative responsibilities only, thereby maximizing cost-offectiveness A proposed operating budget for LSCC is appended as are the student interest questionnaire and a list of program priorities and locations (Author/DC)

This document is an update of the 1975-85 Master Plan-focusing on the long and short-range goals and objectives of the State Board for Community Colleges and the 17 institutions which comprise Maryland's community college system. First, the legal and administrative structures of the system are described, and six goals are identified, including. (1) development and better coordination of the system. (2) provision of equal access to community colleges for all Maryland access to community coneges for an maryland citizens, (3) provision of high quality comprehensive transfer and continuing education programs and services, (4) offering a comprehensive selection of career programs, courses, and student support services; (5) analysis of current and potential services to local communities; (6) increasing the efficiency of operations without me creasing the efficiency of operations without impairing the quality of services. The plan goes on to project systemwide enrollment figures for the nest decade which reflect a continuation of the open admissions policy in turn, the enrollment projections provide a basis for community college program, budget, and facilities requirements over the 1977-86 decade. Finally, major policy directions and actions are reviewed, individual implementation profiles for the 17 colleges are presented, and evaluation plans are suggested. Charts, graphs, and tables supplement the text. (NHM)

This report details the progress and activities during fiscal year 1976 of five projects designed by the Maryland State Board for Community Colleges to further improve the quality of postsecondary occupational education in Maryland community colleges Project I was designed to improve articulation of occupational programs at the secondary and postsecondary levels. Project II aimed at developing a management information system for occupational programs Project III in-volved implementation of a system for the evalua-tion of occupational programs. Projects IV and V were merged with the intent of improving the quality of orientation, advisement, counseling, career development, and placement of occupational students. This report presents summaries of each project and recommendations for future activities Based upon the success of the first two twittes Based upon the success of the first two years of project funding, the State Department of Education has increased the funding level to \$100,000 for 1977 A large percentage of these funds are anticipated to flow directly to the community colleges as they seek to implement project objectives Appended are additional project materials. In early 1976, the Maryland State Board for Community Colleges (MSBCC) undertook a selfexamination of their operations, including goals and legal responsibilities, organization/administration, planning and research, finances, state/na-tional external influences and relations, relations with constituent institutions (program review and approval, student affairs, rules and regulations), and management information systems. In August and management information systems in August 1976, an outside team of experts evaluated the MSBCC's self-study and made recompendations in each study area Numerous positive accomplishments of the Board were noted Among the recommendations were continued major responsibility for community college planning, intensification of leadership in developing regional/statewide activities, expanded utilization of computers, development of a comprehensive management information system, publicizing of alternative fund-ing means, clarification of the community college role in the context of the continuing education function, development of expanded leadership in the area of student placement, renewal of effort in regard to student personnel services, leadership efforts in terms of legal issues and community services, and continued leadership and coordination of the community college sector (JDS)

Identifiers—*Massachusetts
In an effort to facilitate student mobility in Massachusetts higher education for two-year college students to the upper division of four-year institutions, the Massachusetts Transfer Review Council initiated a Commonwealth Transfer Compact. The policy statement indicates that any associate degree from any community college signatory to the CTC will be honored as a unit and construed as: (1) completion of at least 60 hours of work toward a baccalaureate degree, and (2) completion of at least 33 credit hours toward fulfillment of the general education requirements for the baccalaureate degree. Signatory institutions will honor this policy and adhere to (1) the following: the definition of an associate degree transferable as a unit toward a baccalaureate degree as the equivalent of 60 credit hours of undergraduate college-level study, including 6 hours of English/communication, 9 hours of behavioral/social sciences, 9 hours of humanities/fine arts, 9 hours of mathematics/sciences. and the remaining credits to be on a college level. (2) the awarding, upon acceptance, of the full number of credits carned while enrolled in the associate degree program, and (3) continuous review and evaluation of the implementation of this policy and referral to the Massachusetts Transfer Review Council of problems related to student mobility Clarifications and an application ·admission form are included. (MJM)

This Matrix for Planning presents an organized format for systematically recording information relevant to the formulation of long-range planning policies and decisions for the Massachusetts Community Colleges The matrix organizes exatting data into a four-fold conceptual structure. people, programs, facilities, and funding The first category (people) includis enrollment figures, faculty and staff headcounts, a demographic profile of students, a description of faculty activities, and an assessment of the community colleges' share of Massachusetts higher education enrollment. The second category (programs) identifies current programs, and programs Identifiers - * Massachusetts grams) identifies current programs, and programs planned for the future. The overall effectiveness of the system is assessed by presenting figures on degrees and certificates awarded, and data reflecting the community colleges accessibility to students from varying income groups. The third . category (facilities) assesses the system's current land and building holdings, space utilization, and current space rental Finally, the fourth category (funding) reports on expenditures in the last fiscal year, and on costs per student per college

and per program Significant features and leading. questions pertaining to the information displayed are identified, as are the additional information. procedures, and policy decisions that would be required for a continuous planning process. (NHM)

Descriptors—*Collective Bargaining, College Faculty, Community Colleges, *Contracts, Department Directors (School), Faculty Promotion, Fringe Benefits, Grievance Procedures,

*Junior Colleges, *Negotiation Agreements,

*Personnel Policy, Sabbatical Leaves, Teaching

This study was undertaken in the first to provide community, college administrators with a resource tool from which they may readily obtain comparative data on current negotiated contract provisions at other institutions. The report is the first in a projected series of nationwide studies conducted by the Massachusetts State Board of Regional Community Colleges and includes relevant provisions from 84 public community college contracts affecting faculty and certain other professional employees. Data in the report were compiled from contracts on file and therefore may not reflect current practice at a particular institution. Contract provisions selected for comparison include: employee unit definition, management positions specifically excluded from bargaining unit, general contract provisions; work load provisions affecting full-time faculty; provisons affecting chairmen, promotion and tenure policies; definition of grievance; summary of grievance provisions, arbitration provisions in grievance procedure, management rights; union privileges; full-time faculty salary ranges; summer, evening, and overload provisions; insurance and related benefit provisions reported; sabbatical Reave provisions, and leave provisions reported. Having determined the philosophy direction for the state's community colleges, the Board prepared guidelines and a districting plan for their development and operation. The nine guidelines are an open-door policy, personnel services, guidance and counseling, enrollment reciprocity between districts, avoidance of duplicate programs, flexibility to meet population and transportation needs, high school vocational courses integrated into the college program, no expansion into 4-year institutions, a separate community college board, cultural programs as well as adult and continuing education. Details of the statewide districting plan are given, the new districts to be determined by an enrollment figure approaching 1,000 and expectations of adequate local funds (plus state and federal) to initiate and operate the facilities. These factors are to be reviewed penodically Proposals for financing both new and existing colleges are presented Of the ten legislative proposals, the four most cricial were. (1) provision of suft-up funds for new colleges, (2) amendments to current legislation con-cerning the establishment of new colleges, (3) an appropriation of \$50,000 to study new districting; and (4) special legislation for the establishment of a Wayne County community collège (1), (2), and (4) have been passed, (3) will be federally funded. Previous studies and reports are reviewed in the appendix (HH)

The objectives of this study were to obtain responses from students and counselors (in Michigan Community Colleges) to the following questions (1) which functions do counselors feel receive enough or too much emphasis? (2) which functions do students feel receive enough or too much emphasis? (3) which functions do counselors feel receive enough or too much emphasis? (3) which functions do counselors feel receive enough or too selors feel need more emphasis? (4) which functions do students feel need more emphasis? (5) which functions listed do counselors feel are not counselor functions? and (6) which functions listed do students feel are not emphasized at all? The questionnaires for counselors were similar to those intended for student use, with 35 and 30 items respectively Results showed that coun-selors were more concerned with promoting coor-dination among faculty, students, and administration, and with conducting surveys for strengthen-ing student services. Students felt that a greater emphasis was needed on recommendations on scholastic programs and on consultation concerning career plans, educational goals, and probable chances for achieving them. Lists of both counselor responses and student responses conclude this study (KJ)

This document presents the final recommendations and background papers of a task force empowered by the Michigan legislature to consider the mission and roles of the state community colleges, alternative funding modes, and the responsibilities and interrelationships of the state and local governing boards. Following an overview of recommendations and summaries of the reports of subcommittees in the three areas, the bulk of the document consists of a detailed explication of the recommended funding model, and the report of the subcommittee on state-local relations, presented in appendices. The funding model is based on a 50/50 division of responsibility between the state and local districts, including that for leisure-time courses, and is a criterionbased model intended to equalize local tax bases and economies of scale. The model is presented in two sections "The Determination of Gross General Fund Investment Needs" and "A Method for the Allocation of State Funds Based on the Determination. Needs, Medal." Measurements. Determination Needs Model" Measurement critena, methodology, formulae, and sample ap-plications of the model are provided The state and local relations committée report presents an historical perspective, a discussion of areas of concern identified through a survey of communicollege presidents, an analysis of involvement patterns in the state policy decision-making process, outlines the state/local division of governance responsibility, weighs the advantages and disadvantages of centralized versus au-tonomous systems of governance, and concludes that the state should remain sensitive to the need for institutional autonomy and that a more democratic, less bureaucratic system of statewide governance is needed. The survey instrument and definitions of terms are included. (BB)

The study examines trends among students and graduates of the Minnesota Area Vocational Technical Institutes (AVTIs). Some of the data were gathered yearly between 1970-71 and 1973-74, some were gathered yearly between 1971-72 and 1973-74. Seventeen selected variables were reviewed Relatively minor changes occurred over the years on seven of the variables age, sex, marital status, size of household, handicaps, high school graduates, and relation of first job after graduation to training. The percentages of enrollees from households with parents in professional managerial occupations and craftsman-operative occupations tended to increase slightly as did household income The percentage of graduates employed during the first year after graduation has been gradually increasing as had the percent age of graduates employed in related occupations during that time. The percentage of students graduating from ATVIs has been decreasing while withdrawals and students completing training objectives without graduating have been increasing The percentage of students withdrawing for economic reasons has been increasing The percentage of students having only one job during their first year after graduation has been decreas their first year after graduation and the state of students unavailable for employment due to military service. Appendixes tabulate the data with respect to the 17 variables (JR)

A law passed by the 1973 Minnesota Legislature required the development and implementa-tion of an on-going budgeting process and stan-dardized reporting format that is compatible among the University of Minnesota. The state colleges, the junior colleges, and the public vocational-technical schools. This report is divided into an introduction, a review of the process of developing a program budget for postsecondary education, a description of the program budgeting model and classification system, the data, and a statewide summary and commentary. This re-port provides a comparative examination of each Minnesota public postsecondary education system of, proposed resource expenditures and outputs for the biennium with each system's estimated current expenditures and outputs and presents a method of examining postsecondary, education data that, until now, has been unavailable to the public and their elevated officials it shows system and statewide budgets, participation, and appropriations in a program budgeting format. These tables of data relating to the 16 Mississippi public junior college districts were compiled from the 1975-76 Annual Report to the Junior College Commission, the budget requests for fiscal year 1978, and other sources. Full-time day enrollment totalled 23,795 in 1975-76, an increase of 3,754 from the previous year. Part-time and evening enrollment totalled 11,589, an increase of \$2,585 from the previous year Total enrollment, including miscellaneous categories, totalled 45,753, an increase of 6,398 from the previous year Enrollment data is broken down by district and the academic classification of students in all, 8,771 students received degrees or certificates | during 1975-76. A total of \$47,707,344 was available and expended for junior college operations during 1975-76 Revenues and expenditures are reported according to district, and source or direction of funds. Summary data are also provided on the preparation and salary, schedules of personnel, and the extent of library, transportation, dormitory, and auxiliary services. Selected enrollment data for 1976-77 is also provided. (JDS)

Every institution of higher education in Mississippi was surveyed to determine the origins of students. The purpose of the study was to try to find the answer to the large increases in total en-rollments reported by the state universities, the public junior colleges, and some of the private-senior colleges after the opening of the 1975 fall semester. Total enrollment figures are given, along with a breakdown showing the home coun-ty for in-state students and the total number of out-of-state students for each institution. (JMF)

The Missouri Commission on Higher Education initiated, a comprehensive study of existing and

developing state junior colleges in order that a master plan for the orderly development of a state system of comprehensive junior colleges might be developed. Among the areas examined by the study were (1) the status of public famor colleges. (2) the direction of junior college development in Missouri, (3) the functions of the college, (4) statewide districting, (5) cooperative interstate planning, (6) statewide planning and coordination, (7) the need for voca-tional-technical education, (8) patterns of financial support for junior colleges. (9) criteria and procedures for establishment of new college districts, (10)-the relationships of the junior college to other higher education elements and govern-mental agencies, and (11) population characteristics, trends, and prospects in relation to a statewide plan of junior college districts. Among the results of the study were 22 recommendations for needed legislation (JDS)

The 1974 study of program availability in Mis souri provides data on the number of students re-gistered in courses taught in the fall of 1974 and indicates the optimum number of students who could have been accommodated in each of the courses at that time. The information includes the level of the course and HEGIS discipline of the aggregate courses. The data were analyzed for the purpose of determining as accurately as possible how many additional students by program area and level each surveyed institution could have accommodated in the fall of 1974 given the same faculty, support staff, and physical facilities and within optimum class size limits as defined by the individual institution (Author/JMF)

This report is a synopsis of past studies of post secondary education in Montana. Its purpose is to provide a brief sketch of each past study and to fulfill House Bill No 578's (1973) mandate to the commission to assess the evidence and resulting recommendations made in prior studies relat ing to postsecondary education in Montana The report summarizes where applicable, the methodology, findings, recommendations, and impact of each study Nineteen studies were con-ducted during the 30 year period 1942 1972. This does not include various studies and reports. on federal law or special audit reports conducted by state agencies. The major focus of the studies reviewed governance and administration, but the scope ranges from functional responsibilities of the components of postsecondary education through such subjects as community college planning, vocational-technical education, and resource utilization Perhaps as important as any of the individual studies, this report demonstrates the continuing interest and concern of the state of Montana in postsecondary education. Appendixes include recommendations made by prior studies (Author)

A questionnaire survey was conducted to deter mine the amounts and types of interinstitutional cooperation, including the number of persons participating, that existed in Montana postsecondary education. The cooperative activities included consortia of educational institutions, faculty exchange, provisions for student exchanges, and/or concurrent enfollment, articulation and gransfer agreements, facilities sharing, other epoperative agreements, and joint degrees. In addition, the potential for such arrangements for improving esonomic and educational effectivenels was assessed Results of the survey included the following findings (1) three community colleges, the three private colleges, and the six units

of the Montana University System participate in consortia; the five vocational/technical centers the institutions participate in various forms of facilities-sharing with state, local, and private agencies, (3) student transfer is probably the major point of confact between and among major point of conjact between and among universities, colleges, community colleges, and vocational/technical centels, (4) there is little formal faculty exchange and sharing. (5) there are nine formal cross-registration and student exchange agreements it is recommended that state-funds support of continuing education problems be studied, the concept of faculty sharing he explanded exploration of problems be studied, the concept of faculty snaring be expanded, exploration of avenues of cooperation be continued, and the problems of student articulation and transfer be undertaken on a formal or an ad hoc basis (There are five appendixes to the report) (DB)

Vocational Education Identifiers—*Nevada This document is a 1971 master plan for the development of Nevada community colleges. The mission of the community college is seen as five fold occupational university parallel, develop-mental, community service, and counseling and guidance Based on projected manpower needs, the establishment of two new community colleges in Clark County and Western Nevada is recommended. These two new colleges will join Elko Community. College as the foundation of the Nevada and minimum college system. Enrollment projections for each of these three institutions are made for the Utwart parties and no in 1989. Period. made for the 10-year period ending in 1980 Pro jections are bused on an assessment of high school graduate interest in specific profests, and the expected effects of Nevada's public school adult education programs, of existing post-sector dary occupational programs at the state universi ties, and of population growth. In addition, policy recommendations are made concerning admission standards, college size, grading, articulation, • budget facility improvement, and expansion Specific recommendations include the establish ment of an open door policy, a grading policy designed to pass students, rather than to fail them, a goal of 60 percent of total student enrollment in occupational programs, a maximum size of 5,000 full-time equated students for any community college in the state (NHM)

This study probes the relative effects of 2-year and 4-year college environments on their students. Using a population of 305 male students who had resided and graduated from public schools in the same county, 195 were randomly the students of the students of the students. selected for the study These students-68 from a university and 46 liberal arts, 25 technical, and 56 business students from a nearby 2-year junior college--were given a variant (Bingham's Occupa-tional Repertory Test) of the Modified Repertory Test, both at college entrance and 21 months later Changes in self-esteem, level of incorporation of occupational concepts, and level of incorporation of social role concepts were noted Statistical analysis of data suggests that (1) preselection factors were operating in the students' initial program choice, (2) 2-year college students experienced a noticeable increase in selfesteem and identification with higher status occupations, making post-test differences in self-esteem between 4-year and 2-year college students insignificant, (3) the identification between 2-year college students enrolled in occupationally centered programs and their occupation was intensified, and (4) there was little change in the self-esteem or occupational identification of students completing their first two years of university experience Based on these findings, the effects of the 2-year college environment are seen as particularly significant in developing occupational and self-concepts (JO)

This report was prepared to assist the New Jersey Board of Higher Education in allocating state appropriations to community colleges. The selected financial data and related nonfinancial data describing the fiscal operation of community data describing the fiscal operation of community colleges as projected for 1974-75 are aummarized. The paper is organized around five topics. Costs in Perspective, Allocation of Resources, Sources of Revenue, Enrollment Data and Output Measures, and Facilities and Capital Data. New Jersey's community colleges have experienced dramatic growth over the 6-year period 1969-75 in both enrollments (290 percent) and operating costs (400 percent), and in the years 1973-75, costs have far exceeded enrollments. This and other trends are expected to continue More other trends are expected to continue More money will be allocated to physical plant and general expense, less to instruction. While student tufftion will continue at 25 percent of educational costs, the remaining 75 percent is shifting from the state to the counties More students will enroll in career programs and elect to study partin career programs and efect to study part-time Expansion of facilities will reflect the moderate enrollment growth now being ex-perienced Data is presented throughout the study in tabulated form. This financial report of the New Jorsey communit) colleges is organized around a series of five topics. (1) costs and enrollments, (2) allocation of resources, (3) sources of revenue, (4) enrollment profile and output measures, (5) facilities and capital data. Each of the five sections contains quantative data from budget projections submitted by the colleges for fiscal year 1975-76 and prior years. State aid to the community colleges actually supports a full-time equivalent TE) student count 3 percent below the enrollment projections of the colleges in 1974-75, in addition, there was a major discrepancy between the high actual enrollments at, the colleges (60,257 FTE) and the original projections of the colleges (57,656) Latest estimates of enrollment for 1975-76 are for 66,400 FTE However, because of state imposed FTE limitations, and elimination of the conventional state reimburse ment mechanism for overenrollments, the col-leges will only receive state funding for \$3,129 FTE There will be, however, a marked increase m other sources of funds, including federal, county, industry, and private The increased enroll-ment appears to be part of a general pattern of overall growth in college attendance as an alternative to employment because of a scarcity of jobs Detailed financial data are tahulated and appended (Author/NHM)

Personnel development programs for post-secondary vocational and technical faculty in selected postsecondary educational institutions in several states are identified and flescribed according to the following criteria: (1) objectives of the program. (2) organization of the program. (3) cost of the program; (4) motivation of staff, (5) pedagogical skills emphasized. (6) technical content emphasized, (7) constraints on the program, (8) the evaluation process, and (9) program changes needed—Programs at 25 colleges in 17 different states are described. The programs are institutional programs in continuous operation. not departmental or for special groups. Each is focused on ungrading the teaching skills of focused on upgrading the teaching skills of technically competent, yet pedagogically unprepared, persons from business and industry who are instructors in vocational and technical educa-tion in community colleges and technical in-stitutes (Author/JDS)

Identifiers—*New Jersey

Data drawn from audited financial statements of the individual county colleges of New Jersey for fiscal years 1975 and 1976 provided the basis for this report on the county collèges' finances with regard to sources of current income, full-time-equivalent (FTE) atudent enrollments and costs, educational and general expenditures, and physical plant and capital. Analysis of the data for fiscal year 1976 compared to fiscal year 1975 revealed: state aid accounted for 28% of total revenues in 1976, up 2%; county appropriations constituted 35% of revenues, up 20%; 29% of revenues came from tuition and fees, up 13%; 8% was contributed from other sources (grants, investments, interest income, miscellaneous), down vestments, interest income, miscellaneous), down 16%, educational and geheral expenditures increased 13% while cost per FTE atudent declined .5%, and 1976 FTE enrollment was 67,894, up from 60,056 FTE's in 1975. Overall, the rate of growth of expenditures (13%) was greater than the rate of growth of revenues (12%). However, when inflationary features are accounted for the when inflationary factors are accounted for, the while FTE enrollments grew by 13%. Further study of what constitutes a desirable balance between sources of revenue for the county colleges is needed, Appended are financial data for all colleges. (JDS)

This is the third annual study of the application and enrollment patterns of university transfer students. This study was conducted in response to the requests for basic information about the intercampus mobility of students attending institutions under the program of the State University of New York Findings include. (1) A total of 21,697 transfer students were enrolled in the fall 1972 at state university institutions, 60% in senior institutions and 40% in 2-year colleges. (2) The most common type of transfer student was the 2-year to senior institution transfer, followed by transfers to state university 2-year colleges from outside the state university (3) Other types of mobility are as follows, state, university 2-year college to 2-year college, state university senior college to senior college, and state university senior to 2-year college (Author/PG)

Because of the importance of reliable information regarding transfer students for regional and

tion regarding transfer students for regional and system-wide planning, and interinstitutional cooperation, the data gathered for this study have been organized and presented in a variety of for-mats designed to provide immediate answers to a wide ranger of questions that may be formulated regarding transfer students. The basic data are a presented so as to directly relate the transfer students The basic data are presented so as to directly relate the transfer student's prior institu-tion and current SUNY institution and entry level This information is provided for individual institutions, institution types, and institutions by coordinating area. Additional information is provided regarding trends in transfer students, relationship of the associate degree to transfers, admission success of transfer students, and other related information. A brief summary of some selected aspects of transfer student mobility expressed as percentages of all transfer students follows: (1) 58 0 percent from a SUNY institution to SUNY institution to a SUNY institution to a SUNY institution, (2) 1.6 percent previous institution unknown; (4) 63 9 percent from all sources to a SUNY senior institution, (5) 36 1 percent from all sources to a SUNY two-year institution (Author/KE)

This document draws from an extensive review

of articulation practices in schools and colleges in New York State. It summarizes and comments on articulation activities, and describes individual programs. Areas discussed are: (1) acceleration and crediting of college-level study; (2) curriculum articulation; (3) guidance, counseling and advisement; (4) admissions and recruitment pracadvisement; (4) sumsetup state of tices; (5) pasic skills development; (6) programs for "new" student groups; (7) studing of facilities and services; and (8) formal structures for achool-college articulation. A general conclusion was that the barriers between schools and colleges be reduced through a variety of approaches leges be reduced through a variety of approaches within institutions, between comparative apecialization units of each sector, between individual institutions, and among institutions in a locality or region. Included are: (1) summary tables on crediting practices, perceived needs, and obstacles in school-college articulation; (2) a listing of contract offices in the New York State Education Department; (3) a bibliography of publications pertaining to articulation; and (4) a ouestionnaire on articulation practices. questionnaire articulation (Author/KE)

This report reviews the major problems facing New York community colleges and presents the recommendations of a Committee of the State University of New York Board of Trustees. The University of New York Board of Frustees, the nature and range of problems were clustered in thee areas; provision of adequate funding and opportunities for optimum resource utilization; clarification of the roles and interrelationships of local sponsors, local trustees, and the state; and accountability in programmatic areas. In light of the fiscal exigiencies faced by the state and of the needs of the community colleges, the Committee recommended. (1) that programmatic funding recognizing differential program costs be adopted to provide equitable resource allocation and improved management planning, (2) that guidelines for program approval and retention be developed and implemented; (3) that Educational Opportunity Programs be reaffirmed and strengthened; (4) that no new regulations governing terms of service for local trustees be adopted; (5) that guidelines for community college presidential search committees be established; (6) that a search committees be established; (0) unal a management information system for collective bargaining be developed, (7) that an equitable tuition policy for part-time students be established; and (\$) that regional admissions policies for high demand restricted-access programs be considered. State support formulas, a draft mission statement, guidelines for the presidential search process, and community college statistical data are appended. (JDS)

In order to compile attrition/retention information for students in the State University of New York (SUNY) system, this study identifies and charts the flow of two full-time, first-time student cohorts. (1) students first envolled in fall 1970 in conorts. (1) students first envolled in fall 1970 in bachelor degree programs. (2) students first enrolled in fall 1972 in two-year degree programs. The tables in this study present information in the form of flow charts which divide the cohorts into various aubdivisions reflecting the relative success of students in achieving their educational objectives Data are presented for the SUNY systems as a whole, and for individual SUNY institutions, with university centers. Important colleges meluding university centers, university colleges, specialized colleges, atatutory colleges, health sciences centers, agricultural and technical colleges, and community colleges. The current data indicate that SUNY maintains a favorable position with regard to comparable national figures The most striking characteristic of the current data, as compared with data from previous reports, is that summary data for SUNY have remained virtually unchanged. This constancy is in spite of some substantial changes in the data for individual institutions, especially some of the community colleges (NHM)

Data presented were made available through the cooperative efforts of the State Education Department and the responding institutions, the principal data source being the computerized Postsecondary Information System's DATACORE This document demonstrates some of the system's capabilities in displaying basic en-rollment data. Three approaches are used here to display data, each providing a different perspective on enrollment patterns and trends Some of the general findings are as follows total state en-rollment reached an all-time high in 1975 of nearly one million students, both full-time and part-time undergraduate enrollments increased. but part-time enrollment grew more rapidly, fullbut part-time enrollment grew more rapidly, full-time graduate enrollment increased slightly, while part-time enrollment decreased slightly, the State University and private sector enrollments increased at about the same rate while City University enrollments decreased private and state community colleges experienced substantial increase in both full-time, and part-time undergraduate enrollments, private engineering technical colleges grew substantially in enrollments; and the proportion of New York State high school graduates going on to possecondary high school graduates going on to postsecondary education in the state has remained stable over the first half of this degade. The report also provides detailed data on individual institutions (Author/LBH)

This study determined curriculum costs in comprehensive junior colleges for one college-parallel, 28 technical, and 16 vocational curriculums. Differential costs were found for each of ten components identified for all curriculums. Aggregate curriculum costs were determined from the sum of the ten component costs. Differential costs were found among all curriculums and for the same curriculum offered in different institu-tions. Total costs were determined for all voca-tional, technical; and college-parallel education in each institution. Such total costs were termed program area costs. It was found that differential program area costs were present for all institu-tions for both years of the study. When averages were computed from program area costs of the ten institutions, a consistent cost ranking was found for both years of the study Technical education was found to be more costly than vocational education: College-parallel was the least expensive. This study developed a mathematical forfilula for budgetary purposes that would pro-forfilula for budgetary purposes that would pro-yole differential financial treatment for com-ponent costs. Total curriculum needs were the aggregate of component costs and total institu-tional need was the aggregate of curriculum needs. (Author/HH)

To evaluate and assess vocational education programs in the various institutions of North Carolina, data were collected regarding program and administrator characteristics. With emphasis on high schools and community college programs, the survey led to several conclusions which include: (1) The position of Director of Occupational Education is a widely established position at the administrative level, but the concept of advisory committees for occupational education seems difficult to implement, (2) Superintendents are professionally qualified on the basis of degree and administrative experience but many (43 percent) have had no occupational work experience other than in schools, (3) Inadequate implementation of citizens' advisory committees prevails at the local school level, (4) Supply and equipment are two items of considerable concern to teachers, (5) High school occupational education has an enviable record of student holding power, with less than 10 percent of students as dropouts, and (6) It appears that the majority of community college students were beginning their vo-cational programs at the community college level, rather than continuing a career begun in high school. Identifiers—*North Carolina

To determine perceptions of occupational education programs held by occupational education instructors in North Carolina, a random sample of 48 instructors at the junior high and high school level and another 48 from the community college and technical institute level were selected from each educational district. In each group of

48, 40 received questionnaires, 3 were interviewed, and 5 comprised a replacement pool, A questionnaire survey and an interview schedule were constructed. The data from those instruments determined that most occupation education instructors have bachelor's degrees, about half have taught in the field five years or less. The instructors define the major goal of their programs to be the transmission of job related skills and consider the goal is generally being achieved Enrollment in their programs is increasand retributed in their programs is increasing. materials and equipment provided are
adequate, and local program directors were
sources of greatest support Safety practices were
emphasized more, and citizen advisory groups
were more commonly employed at the community
college/technical institute level A majority of both levels of instructors felt a need for program changes and professional development programs. Barriers to program development were felt to be finances and administration/organization (The questionnaire and the interview schedule are appended >(AG)

This 10-year strategic plan for the period 1975this 10-year strategy pian for the period 1973-85 is one of three interrelated plans developed for the North Carolina Community College System Population projections, along with projections of laboraforce participation rates by age, race, and sex are used to project the total laboration in 1985. Participation of amplications in 1985. race, and sex are used to project the total labor force in 1985 Projections of employment by industry and of occupational and related training requirements for the 1970-1985 period are made for the state and its 17 official multi-county planning regions, as well as estimates of training needs unmet in 1970 This information is translated into statewide projections of graduates and enrollments in broad instructional areas (college transfer, general education, technical, and vocational) and in extension programs, with associated costs, and construction and faculty/staff requirements. Considerations of the system's goals, assessment of economic and educational environment, and projections of output from other sectors of the state's educational system are discussed to detail A description of the projection procedure is appended (MJK)

Using the systemwide enrollment information from the 1975-85 strategic plan for the North Carolina Community College System, this five year (1975-80) operating program plan presents enrollment projections for major program areas by multi-county planning regions and individual institutions Projections are consistent with past experience, projections of economic activity in the region, and the estimates of unmet training needs in the region as of 1970 Modified institutional projections are compared with the separate projections made by the colleges in 1974. In addition, this document includes projections of employment in 1985 for each of 36 industry groups cross-classified by 128 occupational groups, projections of requirements within each occupational group during 1970-1985, and the training needed for these occupations. Note that these projections are based on manpower projections and do not necessarily relate to the state's mandate for comprehensive education (Author/MJK)

(1) replicate and update data gathered in 1969 about North Carolina Community College System (NCCCS) credit students; (2) provide a similar control of the control of profile of non-credit students; (3) provide a profile of all North Carolina adults (over 18) in 1970 to serve as a comparison basis; (4) examine student value orientations toward education and reasons for attending institutions in the NCCCS; and (5) analyze the relationships found between selected programmatic, demographic, and socioeconomio variables. In order to achieve these objectives, a 45-item questionnaire was administered to 13,723 students enrolled in 16 NCCCS community colleges/technical institutes during the spring quarter of 1974, 10,074 (73 percent) were returned in quable form. Data presented includes demographic, socioeconomic, and attendance the experiment for the academic, and attendance characteristics for the entire sample, compared characteristics of curriculum vs extension (non-credit) students, characteristics of students by major educational program area, characteristics of the adult population of, the state, changes in credit student characteristics since 1968, student employment information, future plans of students by program area, and the institutional characteristics which influence student selection of a college Sampling and data analysis techniques are detailed (Author/DC)

In order to develop teacher and administrator evaluation systems based on specific measurable criteria, a research population of three groups (full-time students, teachers, and administrators) was drawn from the 57 North Carolina technical institutes and community colleges. Random sam-ples selected from 16 institutions were surveyed, with findings based on responses from 181 students, 150 teachers, and 92 administrators From field testing of the evaluation instruments at six institutions it was concluded that the evaluation criteria developed were valid Survey results indicated that generally attitudes of all three groups the desired that generally attended to the control of the control low level of attitude was due to the evaluation systems currently in use Each group felt that evaluation of a teacher's or an administrator's effectiveness should be based on a combination of information sources Teachers and administrators agreed on how often evaluation should be conducted and that the time should be determined by the institution They also responded positively to all the criteria listed for both groups and were fairly close in their rankings of both sets of criteria included in the report are literature reviews on both teacher and administrator evaluation and the teacher and administrator evaluation forms developed Detailed responses are presented in narrative and tabular form. Appended are the 11 evaluation forms used in the study including the survey instrument, teacher and administrator opinionnaire, student evalua-tion forms, teacher and administrator self-evaluation forms, and evaluation forms for chairman, peer, and staff (MF).

This document is one of five manuals designed to improve management practices in Ohio twoyear colleges The guidelines and criteria presented here are intended to be used as yardsticks for institutional evaluation of student registration and class scheduling practices. A chapter on the planning process discusses the steps to be taken in planning, definitions of terms, outputs expected, goals, and objectives A chapter on schedule preparation discusses criteria for curriculum and cost evaluations, and outlines methods of determining the numbers of class sections and day and time assignments, and of determining who should be involved in such decision-making A chapter on space scheduling discusses who is responsible for assigning classrooms, what process should be used, how to settle disputes, when assignments must be made, when to notify students and faculty, and how best to utilize space A chapter on registration systems provides general guidelines for advance, open, and late registration. The final chapter discusses data needs and data processing methods, the use of commercially developed computer-based registration and scheduling systems, and on-lina computer regis-tration techniques. A flow chart of a cardoriented registration system for a small college is appended (DC)

This document is one of five manuals designed to improve management practices in Ohio two-year colleges. This manual provides administrators with an organized and logical discussion of the planning process, examples of effective prac-tices, practical and useful ideas to improve planning practices, and criteria for effective planning which can be used by individual colleges in evaluating and improving present planning processes. A chapter on planning processes presents a detailed discussion of how to write planning objectives, how to identify planning needs, how to calculate and forecast income and expenditures, how to determine priorities, how to allocate resources, and how to implement plans. A chapter on planning organization discusses where to begin, who should participate, and how to identify long- and short-range planning needs A chapter on prerequisites for successful planning discusses the needs for an information data base and the criteria with which to evaluate it. The final chapter contains examples of the various products of the planning process. A detailed description of the techniques used to develop in-stitutional goals and objectives, sample plans developed by two- and four-year colleges and a bibliography of planning literature are appended. This document is one of five manuals designed to improve management practices in Ohio two-year colleges. The purposes of this manual are to document specific recommendations for desirable management practices in each of the areas of computer services and to make available criteria and guidelines that can be used to evaluate institutional performance. The first chapter is introductory and discusses computer utilization in instruction, institutional research, administration, and public service, it also discusses the purpose, scope, goals and objectives, functions, and management of computer services Chapter II discusses the process of planning for computer services—the factors affecting the process: the time span, the components to be considered, the use of computers in teaching computer languages and concepts, in problem solving, and in information processing, the needs of various kinds, of

users, cost effectiveness analyses; and the use of committees for planning, Remaining chapters concern the financial implications of computer services, the need to establish standards for computer use, organizational and staffing needs, and inter-institutional cooperation in sharing computer services Discussions of techniques for forecasting and of hardware and software moni-tors, examples of existing computer networks, and a bibliography are appended (DC)

Budget, *Ohio

By provision of law, the Ohio Board of Regents must review the appropriation requests of the public community colleges and the state colleges and universities and then submit recommendations regarding the biennial higher education appropriation for the state. To do this, the Board of, Regents developed a Model Program Expenditure Budget This procedure depends upon two funda mental processes (1) a uniform program classification of instructional offerings by the public institutions of higher education, and (2) an ongoing resource analysis by which the actual expenditure experience of each public institution of higher education for instruction in these different programs can be determined and models for future expenditure requirements can be devised The importance of these model budgets by program is threefold (1) They provide a framework within which to establish state subsidy support and a corresponding level of needed student fees (2) They make possible an equitable distribution of available state appraination support among all public institutions of higher education (3) They provide guidelines to public institutions of higher education in their utilization of available financial resources (LBH)

This report was designed to aid ongoing development of statewide planning and coordina-0 tion for Ohio's complex two-year college system The mission of this system is defined in terms of four areas Access, Program, Stewardship of Resources, and Institution and the Community The system is dedicated to the concept of open education with minimal cost or obstacles to the public Ohio has developed four separate twoyear college systems in the last 12 years communety colleges, state general and technical colleges. technical institutes, and university branches. The Ohio Citizens' Task Force on Higher Education made no recommendations about revamping the system to overcome the complex governance problems, choosing rather to define the boundaries of each type of college Since expansion in number of colleges has been curtailed, the major concern in planning is to equalize the availability of programs throughout the state. Special attention is to be given to those areas where unwarranted program duplication and unnecessary in-stitutional competition exists. Appended is a list of technical associate degree programs available in Ohio and a discussion of the Justification for

inclusion of a program/at any single college on the basis of demographic and manpower needs assessment for a community (MJK)

A survey was conducted in an effort to determine the state of development of institutional research in Ohio public two-year institutions A questionnaire mailed to the chief administrative officer at each campus yielded a response rate of 84% Results of the survey showed (1) at least 84% of the two-year campuses have or may be served by an institutional research office. (2) 62% of the autonomous campuses had institu-tional research offices. (3) the educational backgrounds of those responsible for institutional research was generally strong, although most had only one to five years of research experience, (4) only six of the two-year campuses had a person responsible for institutional research on a full time basis, while 32% of the campuses required less than 25% of a staff member's time in the fesearch function, (5) approximately 300 studies were sonducted annually at two-year campuses and respondents indicated significant interest for further studies related to curriculum, instruction, goals and objectives, public relations, and com-munity studies, and (6) priorities for institutional research were identified as determination of ful ture and immediate needs and identification of institutional strengths and weaknesses, but preparation of descriptive reports, while low in priority, was the second most time-consuming function (JDS)

This report examines the need for long-range, state-level planning in higher education to accommodate rising enrollment, expanding knowledge. and the need for educated manpower It describes the state s legal provisions and policies for establishing and operating junior and senior colleges and state universities (all directives subject to periodic review and revision). The "selective access' admissions policy should be continued, to encourage each student to seek his best educational environment. For example (1) junior colleges should retain their open door policy, emphasizing vocational, technical, and adult education, (2) senior colleges should admit students who expect to complete at least a bachelor's degree; and if stressing technical programs, can

have slightly lower admission standards, and (3) universities should concentrate on upper-division, professional, and graduate programs and on research, and should gradually decrease the number of lower-division students by maintaining higher admission standards than the colleges. The report includes other details of the state system, both practical and philosophical, such as self-study projects, transfer policies, and funding it concludes with a warning against the waste and conflict inevitable among a diversity of state agencies, and urges that the partnership between federal and state agencies be strengthened to prevent their working at cross-purposes (HH)

This study reports data collected during a state-wide investigation-into the current and future junior college needs of the people of Oklahom: Factors investigated include current and future population, student enrollment, and economic patterns, manpower distribution and needs, existing and required educational services, financing and existing interfaces among 2-year colleges themselves and with other state-wide institutions of higher education. The following conclusions and recommendations were typical. First, gearing the system more to the needs of the state, making post-high school attendance opportunities availabe to all, and meeting the increasing need for semi-professional and technical training were recommended To do this, it was conceded that the old notion of a school in one physically located campus could be, under certain circumstances, replaced by a "teaching service area"—where course offerings were adaptable to the needs of the community and that required few permanent facilities in addition, it was recommended that duplication in recruiting and program offerings should be reduced, as should current inequation in financing methods and present inefficiencies in coordination among the various institutions of higher education in the state (JO).

Intended as a flexible instrument, this guide suggests approaches for providing (1) meaningful coccupational education throughout the junion high and high school structure. (2) opportunities for attaining entry level occupational competency in the secondary education complex, and (3) oc in the secondary education complex, and (3) oc cupational education at the high school level which is appropriate to continuation beyond high school. On the basis of (1) the adoption of the occupational cluster concept which involves its grouping of occupations with identical or similar skill and knowledge requirements, (2) the implementation of a program of occupational exploration in grades 7 through 10, (3) the availability of adequate guidance and counseling, and (4) the provision of introductory courses at the ninth and 10th grade levels, a pattern of occupational education for secondary schools is suggested and approaches to organization, content, scope, and sequence of 12 cluster-based occupational curriculums are presented. The roles of high school occupational programs are identified as providing occupational programs are identified as providing specific preparation for those who drop out and those who do not continue beyond high school, and a complementary learning experience to those who continue their occupational education. The alignment of the 12 curriculums with typical community college programs is illustrated, and the development of agriculture education from grade-9 through the community college program is presented schematically (JK)

This report is organized around a series of ta bles that describe the characteristics of the student population of each institution in Oregon during the fall term of 972. The data is organized into four sections corresponding to the four types of institutions the State Department of Higher Education institutions, the independent, and private colleges and universities, the community colleges, and the proprietary institutions in addition to a section on each educational segment, a summary of enrollment data is provided in this section the total picture with respect to postsecondary enrollments is presented. Also, comparisons among enrollments in the various educational segments are made. Each section on a particular educational segment begins with a short summary of the general indications of the tables displayed in that section. The tables contain information for each of the institutions on headcount enrollment by program level, full-time, equivalent enrollment by program level, head-count enrollment by residence status, a comparison of headcount and fulltime equivalent en-rollment with 1971 levels, and headcount enrollment by major field of study (Author/PG)

Educational Legislation, Guides. *Program Budgeting, *School Accounting, School Districts, *School District Spending Identifiers-Oregon.

This manual offers guidehnes to Oregon school districts and community colleges for budget preparation and accounting. The publication con-tains all changes from the 1973 legislative session, describes the budgeting process, and gives sample agendas, calendars, planning charts, and resolutions to be enacted by a school board in making up a budget. It is the first manual in a series to be published following each legislative session, with reports covering other significant changes to be published during the interm year Samples provide illustrations of the proper school district accounting process for receipts and expenditures. Two sections describe the procedures to follow in conducting a school levy for both the local and the intermediate education districts.

The manual concludes with a section containing statistical information on State funds for schools, salaries, badgets, expenditures per pupil, egrollment, and the population of Oregon by counties (Author/DN)

The information in this report pertains to the

distribution of enrollments in Oregon's postsecondary institutions of education as of fall 1973. It is the purpose of this report to provide a reliable data base for use by those involved in comprehensive statewide educational planning. This is one of several annual reports published by the Educational Coordinating Council that provides information toward the development of such a data base Enrollment information has been gathered from the Oregon State Department of Higher Education institutions, the Oregon independent and private colleges and universities, the Gregon public community colleges, and the Oregon proprietary schools. The data for this report was compiled from the registrars' records as sooh as enrollment stabilized during the fall term. of 1973. The text of this report presents a brief summary section that gives an overview of enrollment data in Oregon's institutions of postsecondary education with comparisons among enrollments in the various educational segments. This discussion is organized around the tables presented in the text of this report and around information contained in the tables of Appendix A Following the above discussion, a brief summary of fall 1973 enrollment data for each of the four educational segments is presented (Author/PG) 406.

Descriptors—*Disadvantaged Groups. *Dropout Characteristics, *Educationally Disadvantaged, *Junior Colleges, *Minority Groups, Questionnaires, Surveys

A discussion of disadvantaged students in 2year colleges concludes that they usually come from minority groups, are underrepresented in in-stitutions of higher education, have little economic support and are characterized by mar-ginal traditional academic qualifications. A number of classification schemes used by social. scientists are discussed with the implication that fadministrators of 2-year colleges need to be more

. 3

sensitive in identifying and selecting students who might have some chance of academic success. The final section of this paper reports that a sample of administrators view the major causes of disadvantaged student attrition as inadequate motivation, student finances, emotional stability, and academic abilities. A large percentage of administrators indicated a lack of district Support of such students and inadequate finances for institutional programs. The questionnaire surveying the administrators is appended (MN)

Descriptors—*College Curriculum, *Curriculum, *Educational Programs, *Junior Colleges. Colleges. Program Evaluation

The first phase of development of the contemporary 2-year college established the transfer or pre-professional goal, the second phase initiated the additional goal of occupationally-oriented education of a post-high school level and the third phase introduced the goal of community service Ideally the public 2-year college should offer diverse curricular programs (transfer, occupational-associate degree and occupational-certificate), have guidance and counseling readily available, and provide special services for remedial and continuing education students. A representative sample of public 2-year colleges was studied with respect to admission policies, counseling services and curricular programs. The results of a survey examining the extent to which public 2-year colleges are conforming to this ideal model indicated that almost all 2-year colleges fulfill the guidance and counseling standard, but little over half of the colleges have the curricular offerings and admission policies expected of public 2-year colleges. Much more effort must go into encouraging and assisting these schools in widening their doors to new students and developing remedial education (MN)

This is the third study conducted to analyze the transfer pattern of community college students in Pennsylvania Information sources were student followup data from the community colleges and enrollment data of all higher education institutions. The followup data showed that the trend from 1970 through -1973 had been a rather consistent distribution of transfers among the various segments. In 1973, the percentages of transfers to the segments were out-of-state. 12, state-owned, 25, state related, 37, state-aided, 6, private, 20 The most significant change was a doubling of the number of students transferring to the stateaided segment over the 4-year span of the 3.112 students transferring to state-owned or state-related schools. 1.242 transferred to state-owned institutions, and 1.870 transferred to state-related universities. State-related universities not only absorbed the largest number of community college transfers but also accepted a larger percentage as juniors. The study data are provided in 43 tables

Identifiers - Pennsylvania

The Pennsylvania Task Force on Two-Year Postsecondary Education, whose members represented the public at large and all segments of postsecondary education, was commissioned to recommend a rationale for the orderly development of two year programs to meet the needs of Commonwealth residents, to identify the most effective means of providing two-year postsecondary education for all residents of the Commonwealth, to recommend a method of financing two-year educational programs, and to suggest measures for the cradication and avoidance of unnecessary and costly program duplications. The introductory chapters of the report define two-year postsecondary education, analyze existing institutions according to enrollments, locations, and services provided, and present the rationale and goals for two-year postsecondary education. The chapter on effective means of providing low-cost, easily accessible two-year postsecondary educa-tion discusses interinstitutronal cooperation and consortia, the extension of program offerings at existing institutions, and state-level contracting with in-state private institutions and with institutions outside the state Subsequent chapters discuss financial aid to students and to institutions, and methods of avoiding program duplication The final chapters include recommendations and additional comments by Task Force members (Author/DC)

This document analyzes data on student transfers from Pennsylvania community colleges. The major sources of data are community college follow-up reports on graduates (3,132 transfers reported), the statistical reports of enrollments by receiving institutions (4,001 transfers reported), and the results of a Pennsylvania Association of Counselors for Transfer (PACT) follow-up survey of community college graduate transfers. The PAGT survey analyzes data received from the 1,184 respondents by age, program, and receiving institution Seven hundred forty were under 23, 271 were between the ages of 23 and 30, and 113 were over 30. The program areas most frequently chosen were education (282), business and management (259), and social services (154). Data from the PACT survey also that 346, or 29 percent of the respondents, had that 346, or 29 percent of the respondents, had that 346, or 29 percent of the respondents. In additional surveys are supplied to the surveys of some difficulty in the transfer process in addition, the 369 transfers to Penn State Capitol Campus in 1974 are analyzed to determine how many students have a lapse of time between community college graduation and enrollment at a four-year institution. Data are organized into tabular form throughout, and 12 comprehensive charts are appended (NHM)

The Pennsylvania Department of Education has developed enrollment projections to 1995 based on the number of births occurring 20 years earlier. The statewide totals are-then used as a starting point for projections for each segment of the ing point for projections for each segment orking higher education community state owned institutions, community colleges, state related institutions, independent institutions, and proprietary institutions. The trends identified and the goals projected were (1) bringing racial and ethnic minority enrollments to parity with majority enrollments, and (2) increasing the female enrollments to the level of male enrollments. Another significant trend is considered in the increase in graduate and first professional enrollments. The trend projections also consider the impact of lowered tuition and fees on the base projection The available data on adult continuing education is also projected (JMF)

This report contains recommendations for specific actions necessary to improve the system of higher education in South Carolina. It recommends (1) allowing the College of Charleston to become a state supported college, (2) organizing become a state supported conege, (2) organizing a separate system of junior colleges; (3) encouraging cooperation between the University branches and Technical Education Centers, (4) establishing a program of state grants for needy students, and a committee on student aid, (5) allowing Winthrop College to grant degrees to males, (6) designating the Commission on Higher Education as the State Commission on Higher Education Facilities, (7) removing the restriction against "indirect" aid to private institutions, and (8) appointing a joint legislative study committee to study the financial plight of private institutions. The report reviews the progress being made on other projects under its leadership which include coordination of admissions, testing, and long range planning efforts, establishment of new programs and colleges, a review of medical educa-tion, establishment of a uniform reporting, planning and budgeting system, and plans for the development of a consortium Appendices include enrollment patterns and projections, financial statements of the Collège of Charleston, a study of student financial needs, and listings of student aid programs (AF)

This report was prepared in response to a 1971 South Carolina General Assembly directive that Soum Carolina General Assembly directive that the Commission on Higher Education in conjunction with the State Committee for Technical Education submit a plan for implementing a community college system within the state. The report nity college system within the state. The report consists of a definition of a community college, an overview of existing public 2-year inatitutions in the state and a series of recommendations. In order to Bring the separately administered technical education centers and fower-division university branches of the state under unified statewide control and planning, the prime recommendation of the committee is to establish a new state board or the committee is to establish a new state board to govern all 2-year institutions. The board would be responsible for: (1) developing a planned system by dividing the state into districts according to population data, (2) establishing a policy for the creation of local boards of trustees in each district, (3) determining minimum standards for instructional programs and graduation requirements, (4) overseeing the biring practices and capital expenditures of the local boards as well as determining the maximum fee and tuition levels that they may charge; (5) authorizing the awarding of certificates, diplomas, and associate degrees; and (6) participating in various federal aid programs for public 2-year institutions. Alternative recommendations that could have more immediate implementation - are also presented along with a summary of past recommendations, demographic and enrollment data, descriptions of existing physical facilities, and a aummary of the present financial structure. This report is the first section of a "Long Range Plan for Higher Education in Tennessee" by the Tennessee Higher Education Commission. It deals with thee general level and type of program offerings at each of the public institutions and makes recommendations to the Governor and General Assembly on governance of the state's public colleges and universities Recommended goals for higher education include. (1) opportunity for all who have the ability and interest, (2) a system of public institutions, (3) state programs for advanced graduate and professional study, (4) financial support for state programs, and (5), full accreditation for all programs. Specific recommendations include the development of (1) a community college system by 1975, (2) doctoral programs for Memphis State University, (3) undergraduate and other programs, (4) a study of the need for additional doctoral pro-grams, and (5) establishment of one board to govern the state community colleges, and another to govern the six state universities - (AF)

This report by the Tennessee Higher Education Commission to the Governor and the General Assembly identifies the major issues facing the state. and makes recommendations Tennessee must expand educational opportunity for its young people and provide more programs and assistance for disadvantaged and low income youth. The community college program has substantially aided this effort and should be expanded. Graduate programs are the fastest growing part of the state's higher education system and imitted doctoral programs. toral programs are being planned for several universities. Duplication of programs should be avoided through interinstitutional cooperation, and new programs must be developed as needs arise. The report also discusses (1) the need for a more efficient system of higher education, and the Commission's effort in that behalf. (2) the need for reorganization of the higher education governing bodies, (3) financing the growth of higher education, and (4) capital outlay Tables on enrollment, degrees, courses and finances are included, (AF)

Identifiers - * Texas

The Texas concept of higher education is 3part, each part with a legal relation to the others, each with a specific role, and all interlocking under central coordination. The divisions are community junior colleges, senior colleges with first-level graduate offerings, and universities offering doctorate-level work and graduate education for the professions. This policy statement overs the purpose of the junior college (to give general, technical/occupational, and continuing education programs), the criteria for establishing new colleges (size of enrollment, commuting distance, etc.), and determination of college financing methods. This same paper also describes the core curricula for the state's public junior colleges Most important, the curricula junior colleges Most important, the curricula must seek as much common content as possible so that the courses are "freely transferable" among all institutions This should not interfere with a university's privilege of innovation and experiment or with a junior college's decision to offer additional courses General provisions for credits and transfer are listed and charts show the relationship of courses in the major core curricula (Arts and Sciences, Business Administration, and Engineering) (HH)

dergraduate Study, "Upper Division Colleges
One of the major demands arising out of the movement of the junior college is that of increased space for junior college graduates in bacreaset space for jump coning graduates in bac-calaureate awarding institutions. In the state of Texas the 4-year higher education institutions do not have the facilities to accommodate this in-creasing number of students. Thus, the state is faced with 2 alternatives: (1) increasing the number of 4-year colleges and universities; and (2) creating upper-level institutions that provide programs for the last 2 years toward a baccalaureate.. After investigating the role and performance, advantages and disadvantages of upper-level institutions it is evident that the establishment of upper-level inatitutions promises to be the most economical way to meet the need to furnish additional baccalaureate degree oppor-tunities to Texas students. An Assessment of Remedial Education for Vocational-Technical Students in Selected Postsecondary Institutions in Texas:

Texas Education Agency, Austin Dept of Occu-pational Education and Technology, Texas Univ. Austin Dept of Educational Administration

Pub Date 74

Note-161p EDRS Price MF-\$0.75 HC-\$7.80 PLUS POSTAGE

Descriptors-Academic Achievement, Community Colleges, Data Analysis, Demography, Grade Point Average. Literature Reviews, Locus of Control, Persistence, *Post Secondary Education, *Predictor Variables, Program Descrip-tions, *Remedial Instruction, Research tions, *Remedial Instruction, Research Methodology, Self Concept, *Technical Educa-tion, Technical Reports, *Vocational Education Identifiers - * Texas

The purpose of this investigation was to identify those demographic and programmatic (inde-pendent) variables which were the best predictors of student success in a remedial program, as measured by four different enterion (dependent) vaniables, grade point average, persistence, increase, in internality in locus of control, and increase in internative my locus of control, and increase in self-concept. The demographic variables examined were age, sex, yearly family income, curriculum aspiration, and ethnic background. The programmatic variables isolated were included the control of the c dividualized instruction, integrated vocational learning experiences, program focus on self-concept development, and volunteer instructors in order to capture the programmatic variance unaccounted for by these selected variables, the program itself was regarded as a variable. The four programmatic variables examined were so highly correlated that individually they showed no significance Together, however, they contributed a significant amount of variance in student. GPA and changes in locus of control Moreover, the only significant predictor of persistence was the remedial program which contained the most (three) program variables. Unidentified variables were operating in addition to the four specified to create this effect. No variables were found to be predictive of self-concept. Clearly, existing education technology is sufficiently powerful to enable high-risk students to succeed in postsecondary remedial programs (Author/DB)

This document, a report to the 64th Texas Legislature on the state of Texas higher educa-tion, emphasizes atructure, governance, student enrollments, availability of educational opportunity, faculty and ataff, facilities, financing higher education, and student costs, and student assistance Recommendations suggest that. (1) No new public senior or upper-level college or university or professional school be authorized by the Legislature, nor should any existing upperlevel institution or community junior college be authorized to expand into a 4-year institution (2) Establishment of community colleges in those regiona of the atate where statutory and Board criteria for eatablishment of community collegea can be met. (3) No additional state-funded occupational centers be authorized. (4) Coordinating Board continue to develop procedures for atatewide and regional planning and coordination. (5) The concept of the Academic Common Market of the Southern Regional Education Board be ressed by legislating they are abligations. passed by legislation thus enabling Texas inatitu-tions to participate in the program (MJM)

Identifiers—*Texas
Forty-two of 47 public community colleges in Texas currently offer developmental/compensatory programs Programmatic goals fall into two categories. (1) the improvement of cognitive skills to the extent that students can progress into credit courses, (2) affective development to im-prove student self-concept, provide motivation and a successful educational experience in order to reduce attrition rates. Students are generally counseled into the programs on the basis of low scores on entry exams, and often have a history of low scholastic achievement, are returning to of low scholastic achievement, are returning to school after a long absence, or are educationally or economically disadvantaged. Although the programs are remarkably diverse in extent, nature, and organizational structure, they are characterized by small classes, ionovative instructional methodology, and a redefinition of the roles of instructor and counselor, assigning counseling as a part of the teaching process. The difference in organizational structure has resulted in a variety a part of the teaching process. The dillerence in organizational structure has resulted in a variety of accounting procedures; thus, little data are available regarding relative costs. Most of the responding colleges have instituted some evaluation or follow-up procedures for their programs. Appended are a summary fact sheet, enrollment and contact hour data for the programs, and fortunity state for funding fall 1074 (NHM). mula rates for funding, fall 1974. (NHM)

Using the Delphi technique, the staff of Project FOLLOW UP surveyed community college educators in Texas to determine desirable characteristics and maiformity of terminology and defini tensions and uniformity of terminology and definitions for a proposed statewide student follow-up management information system for Texas community colleges. Of 234 individuals invited to become Delphi panel members, 193 (82 percent) accepted and participated 100 percent in the three survey grounds. The panelists represented 4.7 three survey rounds. The panelists represented 47 of the 48 public community colleges in Texas various state agencies the Project FOLLOW-UP Committee, and the Advisory Council for Technical-Vocational Education in Texas The open ended round I questionnaire produced 61 state ments which were presented as round II on a Del-phi format requiring the panelists to respond to each statement on a 1-7 (agree-disagree) rating scale. The third round (formated in the same manner) consisted of 64 statements, and statistical data of round Il responses Panelists reconsidered their round Il responses in the light of group opinion and gave narrative explanations for responses remaining outside the interquartile range Data are organized according to 15 areas of professional employment identified among the panelists. Copies of the three survey instruments and tabulated responses are appended (NHM)

UP, Student Followup Management Informa-tion System, Texas, TEX SIS FOLLOW UP

This report presents the findings of a research study conducted by Alvin Community College (ACC) as a subcontractor for Project FOLLOW-UP, which analyzed orientation and exit interview effects and their relationship to follow-up research on selected withdrawing and graduating students at ACC Subjects of the study were 595 ACC students, 257 males and 338 females Fol-ACC students, 257 males and 338 females Fol-low-up questionnaires were formulated using standard developmental techniques. Graduating and withdrawing students were exit interviewed by staff personnel and some received an orienta-tion to future follow-up questionnaires. In addi-tion, a sample of the study subjects received the treatment by telephone rather than in person it was found that redusting and mithdrawing stiwas found that graduating and withdrawing stu-dents who were exit interviewed and oriented to future follow-up questionnaires were much more likely to subsequently respond to follow-up questionnaires than students receiving exit interviews and to orientation. It was recommended that exit interviews with orientation to future follow-up contact are worthwhile institutional investments and that questionnaire-type follow-up programs should be conducted to provide current feedback from nonreturning students. Such information can enhance student retention Ouestionnaires, related materials, and a bibliography are appended. (JDS)

TEX SIS FOLLOW UP

This report details the development and implementation of an employer follow-up system, by Amarillo College (AC) as a subcontractor for Project FOLLOW-UP, designed to determine employer assessment of the effectiveness of training received by AC graduates in their employ. The study was conducted in two sequences, in each, employer names and addresses were obtained through graduate follow-up surveys. In the first sequence; an interview instrument was designed and personal interviews were conducted with employers of 1974 graduates. In the second sequence questionnaires were mailed to employers of 1975 graduates. The initial mailing, a reminder letter three weeks later, and a second questionnaire mailing the following week resulted in a 91% employer response rate. Findings and conclusions of the study indicate that employer

follow-up can be a valuable tool for developing an accountability model and may provide nece sary reporting documentation data. Employer follow-up studies should utilize mail-out question-naires designed for computer analysis, rather than the costly and time-consuming personal interview technique Appended are numerous computer-geperated data analyses, the graduate and em-ployer survey instruments used in the study, and related study materials. (JDS)

UP, Student Followup Management Informa-tion System, TEX SIS FOLLOW UP This report details the research activities con-

ducted by Del Mar College, as a subcontractor of

Project FOLLOW-UP, in the design, development, and implementation of a graduate followup system. The activities included questionnaire design, development of manual and computerized record-keeping systems, student-graduate identifirecore-keeping systems, student-graduate identifi-cation, and establishment of contact procedures. An advisory committee was formed to guide the general organization and design of the system. Three types of questionnaires were tested a 28-question booklet, a one-page 21-item fill-in-the-blank questionnaire, and a 13-item computer-generated form. Response rates were found to be similar for all. Two hundred eighty-eight 1975 graduates were exit interviewed by telephone graduates were exit interviewed by telephone (83) or personally (205) to test the impact of exit interviewing on the response rate to mailed questionnaires, although this seemed time-consuming and nonprofitable overall, as much as a 20% increase in response rate was noted for some groups. Problem areas in the study included questionnaire design, postage expense, identification of certain types of students, and maintenance of voluminous information. It is recommended that endow assuming computerized information. that random sampling, computerized information management, and bulk mailing be used in the future to reduce cost. Questionnaires, response rate tables, and related materials are appended. (JDS)

Unit: Costs

Identifiers—*Project FOLLOW UP, Student Followup Management Information System, Texas,
TEX SIS/FOLLOW UP

This report presents data on the costs of follow-up studies, based on 29 separate follow-up studies conducted by eight public community/ju-nior colleges in Texas The purpose of this study, conducted by Navarro College as a subcontractor of Project FOLLOW-UP, was to provide-data and information regarding the cost of follow-up studies that would be of use to other institutions and planning agencies Three types of studies were examined in-house surveys, mail out surveys, and personal interview surveys. Several variables were considered, including administrative salaries and benefits, printing costs, computer expense, supply expense, travel expense, and telephone expense Costs associated with each type of study per attempted contact and per response by the method of processing used are included in an appendix Among the recommendations in this report is a formula for funding of follow-up studies The data presented here are not absolute, final data by which follow-up study cost effectiveness can be measured it is hoped that this information will nevertheless be useful to institutions wishing to examine study costs (JDS)

Developed Materials Identifiers - Experiential Learning

Within broad guidelines provided by the Community College of Vermont (CCV), associate degree students write their own individualized, competence-based contracts. Development of the contract includes both assessment of prior learning, and planning for sponsored learning. These are integrated through a "degree development sequence" which includes a variety of workshops, regular meetings with review committee made up of peers, community practitioners and faculty, and CCV staff; and untensive counseling support. The CAEL special project was designed to take a close look at the problems encountered by atudents in the degree development process, and to create a set of written materials to help students develop better learning contracts. This report summarizes the results of the CAEL project to date. The project and outcomes are described in detail, and directions for future development are suggested Although the full set of student materials developed in the project is not included, a detailed evaluation report of CCV contracting and review procedures, a copy of the interim report for CAEL, and a summary of an independent research study evaluating some of the impact of the degree development workshops on student values and career aspirations are appended (Author/HHM)

Descriptors—Action Research, "Community Colleges, "Disadvantaged Youth, Educational Philosophy, Educational Research, "Educational Resources, Junior Colleges, Post Secondary, Education, Student Needs, Student Placement, "Vocational Education, "Workshops In this section of the control of the

In this action research project, a series of workshops was planned and held in order to. (1) develop improved methods for placement of disadvantaged students in occupational-technical programs in the Virginia community college system, (2) identify learning resources to meet insystem, (2) identify learning resources to meet in-dividual needs, and (3) structure the learning resources so that the disadvantaged student will have an opportunity for academic and occupa-tional success Overall, there emerged from the workshop sessions an acknowledgement of the magnitude and complexity of the problem and the need to work toward a solution. There was evidence suggesting that the stated mission of providing developmental studies within the community college system was not receiving the necessary degree of emphasis in learning resources Many felt that until a stronger philosophical educational commitment is made to the needs of the disadvantaged, both systemwide and institutionwide, minimal success can be achieved Other areas of concern were (1) use of existing testing and placement devices, (2) regular learning time blocks as opposed to unrestrained learning time, (3) grading practices, and (4) effective teaching/counseling methods and techniques it was suggested by the partici-pants that future efforts be devoted to the development of three or four model programs The research proposal and some workshop materials are appended (SB)

This report presents a review of follow-up studies of former occupational-technical students at community colleges throughout the nation purpose was to evaluate the effectiveness of fol-low-up studies in measuring attainment of educagoals stated in community college catalogs and literature. This evaluation was made by studying the research emphases, motivations, and procedures for the studies. In winter 1973, a 12-item questionnaire was sent to all 720 public comprehensive two-year colleges which began offering occupational-technical programs prior to September 1970; 520 (72.5 percent) responded This questionnaire requested information on research motivations and frequency, and asked for copies of recent studies. The content of the 85 most sophisticated follow-up studies submitted was analyzed using a three-part 66-item coding instrument A 44-item goals inventory for occupational-technical education was prepared in order to measure the educational goal emphases of the studies. Findings are reported and recom-mendations for improving follow-up studies are made. The appendix includes a list of the 42 community college catalogs and a bibliography of the literature consulted in determining educa-tional goals, a list of the 85 colleges submitting sophisticated follow-up studies, the questionnaire and accompanying letters, and the content coding form and procedures for its use (Author/DC).

This report describes post-community college activities of former occupational/technical stu-dents at 13 Virginia community colleges. The coldents at 15 virginia community coneges. The cor-leges identified 11.623 former students as eligi-ble, of whom 3.433 were graduates who had earned an associate degree, diploma, or cer-tificate. An overall response rate of 61 percent was obtained, 73 percent for graduates and 56 percent for nongraduates. The data were summarized to permit comparison of respondent groups on the basis of sex, race, graduation status, degree earned, and curriculum The fac-tors relating to postcollege activities included employment status, relevance of curriculum to present job, initial and present salary, extent and reasons for continuing education, reasons for withdrawal before graduation, and intention to return to college Greater percentages of gradu-ates than nongraduates were employed full-time Diploma graduates had higher rates of employment than either degree or certificate graduates. The curricular areas of public service and health showed a higher degree of job congruence than other areas. The median salary for initial jobs was \$5.419 and rose to \$7.158 for present jobs. Nongraduates received higher median initial and present salaries than graduates (Author/MJK)

Descriptors—Females, General Education Grad uates *Junior Colleges, *Participant Sutisfac tion, *Student Attitudes Student Charac

teristics, *Vocational Education Former occupational-technical students were questioned as to their attitudes toward their munity college programs. The large majority of respondents rated their overall experience very high, and said they would recommend their col-lege to someone seeking the same program. So cial activities, however, were rated quite low. Women and graduates were much more positive about their community college experience than were their male or nongraduate counterparts Diploma graduates expressed far more positive attitudes than AAS degree or certificate graduates Of curricular groups, public service students were the most positive, followed closely by health students. Minorities were somewhat more positive than whites Students rated the quality and value of their preparation in seven different areas technical knowledge and understanding, joh or learning skills, getting along with people, self-un derstanding, knowledge about career opportuni-ties, communication skills, and general education General education received the highest rating both for quality and current value Yet, when asked to give their opinion on the balance of general education and technical courses, major than half of the respondents wanted to increase the proportion of technical courses. "Jabulated responses are appended (NHM)

This document provides a means of improving and formalizing the communication of institutional research conducted at the 23 colleges in the Virginia Community College System Over 160 reports are arranged in three sections. The first section annotates 44 of the studies, which were selected on the basis of anticipated interest, quality of study design, narrative sections on findings, and program innovation Annotations are arranged by nine topics follow-up studies, experimental studies, innovations, community, counsaling and guidance, student profiles, instruc tion, administration, faculty and staff The second section lists all studies by topic, and the third lists all studies by college. The types of materials intuded vary considerably, from sophisticated experimental designs to casual descriptive studies, perimental designs to casual descriptive studies, from routine reports to innovative proposals Series of routine reports are compiled separately in the topical listing. Although some reports did not seem to be in the "research" category at all, for the most part the listing is inclusive, not exclusive However, the file from which this document was prepared does not necessarily contain all of the reports conducted by the 23 colleges (NHM)

Summary information on undergraduate applications for admission to Virginia's state-supported institutions of higher education is presented. The tables contained in this publication report figures by residence and type of institution for the following categories, total applications receiving decision, applications accepted, percent of applications rejected, applicants accepted and enrolled, and percent of applicants accepted who enrolled One-year changes indicate that the volume of applications for first-time freshman admission increased seven percent, although the total number of in-state first-time freshman applieations accepted dropped by one percent. Transfer student applications have also increased significantly, especially into the community college system, (LBH)

Descriptors—Age Aspiration, Career Choice, Collège Choice, Educational Objectives, Females, High School Curriculum, Junior Col-leges, Males, Marital Status, Parental Background, Race Socioeconomic Background, *Student Characteristics, Student Transportation

During 1973-74, information was collected from nearly 30,000 first-time students at Virginia's 23 community colleges, using the student data form which is appended. The findings were processed by computer, and are organized into five parts (1) demographic characteristics, including sex, race, age, marital status, home area, and distance from home to college, (2) academic characteristics, in terms of high school curriculum and class standing, (3) socioeconomic background, including parents' education occu-

pation, and income, and students income, (4) educational and occupational goals, (5) means of transportation to college The population included higher percentages of older students, marveterans, and military personnel than in national norm group populations Most new students had been in a general or college preparatory curriculum during high school Although high school class standing did not prove a retiable indicator of general program choice, many students' career and academic choices and goals seemed to reflect their parents socioeconomic background The narrative is accompanied by frequent tabulations, and a more detailed breakdown of the data by sex, race, program area, and full or part-time status is appended (NHM)

Identifiers— *Virginia Community College System

This report describes first-time students in the Virginia Community Collège System (VCCS) in terms of demographic characteristics, socioeconomic background, academic characteristics. teristics, and goals Additionally, the VCCS stu-dent characteristics are compared with American Council on Education norms for two- and fousyear public college students nationwide Information on the VCCS students was collected by means of, a student data form administered to nearly 30,000 students during 1974-75 Data analysis showed (1) 51% of the students were men. (2) 13% were minority group members. (3) median age was 23 35 years, (4) 45% were married. (5) 48% had military experience, (6) 62% lived within ten miles of the community college they attended. (7) more than one-third of the students parents had not completed high school, (8) more than half of the students' fathers were employed in white collar occupations. (9) median parental income- was \$14,466, (10) 43% in-

dicated an occupational goal as a reason for attending the community college, (1) 25% had no degree aspirations, and (12) 31% aspired to a baccalaureate or higher degree Overall, it ap-peared that the VCCS was serving a somewhat different population from that of many two and four-year public polleges across the nation. The student data form and tabular data on student characterístics are appended (JDS)

Identifiers - Washington , This first of three related volumes outlines the development and current objectives of communidevelopment and current objectives of community-junior college education in the state of Washington Beginning as small liberal arts colleges, the 2-year colleges were limited in growth until 1961, when the concept of "comprehensive curricula" was officially recognized through state legislation. In 1963, 2-year college funds and accounting were separated from the public school system and, by 1967, the state legislature created an independent system of community colleges. system and, by Loo, the state legislature created an independent system of community colleges. Today, responsibility for community college education in the 22-separate districts can be found at two different levels. Statewide concerns such as establishment, location, finance, and central the establishment, location, finance, and central administrative peretices of the junior colleges are handled by the stafe board A local board of trustees is responsible for operating the colleges in its district, and has authority to determine curriculum, award degrees, and establish administrative rules and regulations Organizational structures at both state and district levels recognize

the need for flexibility in responding to local problems, and coordination is achieved through a system of advisory committees made up of district and state personnel. The general goals and specific operating objectives of the system emphasize open-door admissions, school and community cooperation, and the involvement of all concerned groups in formulating the policies that will affect them. Identifiers- Washington

This second of three related volumes outlines the present status and advancements of the Washington state community college system Currently, the number of people served by this system exceeds the combined total of all other public higher education institutions in the state enroll ment has doubled in the last four years, and tri-pled in the past seven. Most of those attending are transfer-oriented, three out of ten enroll in occupational programs. Examples of the progress toward major system goals (outlined in volume 1) follow Nearly 90 per cent of the state s popula-tion is now withm one-half hour's commuting time of a community college program. To make the opportunities offered by the colleges known to the community, innovations such as mobile counseling centers have been initiated. The year, 1969 saw responsibility for adult education trans-ferred from local school districts to the 2-year college districts Institutional research and instructional improvement are receiving more at-tention in the budget, while closer relationships with the community have resulted from increased use of local expertise in the development, design, and conduct of present and future programs. Along with increasing emphasis on individually-paced instruction and continuous enrollment, a systems approach to instruction has been adopted This approach has also been applied to the district management level through use of a planning, programming, and budgeting system. This third of three related volumes estimates

the operating and capital resources necessary to support each district in the Washington state community college system during the next decade Anyone 18 years of age or older is considered a potential consumer of the programs Because the percentage of the population falling into this category is steadily increasing, and more of them are availing themselves of community college programs, a comprehensive, up-to-date system must be maintained to meet the demand to anticipated that growth in state community college enrollment will more than double from 52,700 FTE's in 1969 to 117,300 by 1980 While the college districts have been able to hold down overall costs through serving more students with equivalent resources and deferring some conequivalent resources and deferring some construction expenditures, increases in operating funds will be required to sustain and improve the current level of service. The increasing demand for educational services makes necessary additional instructional and support facilities, whether on campus or in the community Minimum guidelines for capital construction, developed by the state board, are based on a combination of

utilization rates for instructional space and of space per station These guidelines, coupled with cost-level guidelines, provide solid crateria for the evaluation of capital fund requests (JO)

Most of the recent expansion in public hinter education can be attributed to demands for increasing the variety and number of educational programs, demands stemming from rapid popularing tion growth, and a clampr for innovation and alternatives in education in meeting these demands, particularly in an environment of economic growth and an atmosphere of fiscal optimism, it should not be surprising that the imple-mentation of new programs and the creation of a new institutions would overshadow and outnew institutions would overshadow and out-distance the movement to coordination. However, while overshadowed, such movement never ceased, and as growth and expansion characterize. ceased and as growin and capaciton of the washington higher education, so do cooperation, and integration. This report, containing early recommendations on enrollment distributions, in stitutional roles academic instruction programs, and expansion in the number and capacities of community colleges, set the stage for many subsequent steps to coordinated programming in this state. The primary purpose of this draft outline was to broach the subject of comprehensive long. range educational planning and stimulate insidugussion Suggestions from institutions of higher reducation influenced the second version of the dutline. This document contains the working deal of the planning dealine that resulted from a thing period of review and reaction (Author/PG).

Interest Washington
The Community College Legislative Council was organized in 1971 to provide a means through which a uniform approach to the state legislature and legislation could be achieved by the various organizations representing com-ponents of the community college system. For each session of the legislature, the council prepares a United Legislative Program Issues selected for inclusion in the united program must have the support of a majority of the constituent groups and the opposition of none The united program provides the legislature with an indication of those issues on which there is general agreement throughout the community colleges Position papers adopted by the Legislative Council for 1975 are presented on the following issues (1) Operating budget. (2) cost-of-living adjust-ments--professional and classified, (3) exemption of cooperative preschools from unemployment compensation taxes, (4) property deeded to in-dividual colleges, (5) authority to communicate with legislators, (6) health care for students, (7) fire protection, (8) receipt of gifts by the state board, (9) turtion-free high school completion. and (10) turtion. Descriptors— Age Groups Butters, Educational Finance, Enrollment Indiagnost Enrollment Projections, Junior Colleges, Methods, State

Aid, Student Enrollment didentifiers - Washington.

This performance audit was conducted by the begislative Budget Committee for the purpose of providing the Washington State Legislature with an evaluation of the enrollment projection methods utilized in the development of the Washington State Community College system operating budget request to the Legislature. The Committee studied the planning, operational, and methodological review functions of the Office of Program Planning and Fiscal Management (part of the State Census Board), which has been directly responsible for the community college system since 1970 As a result of this evaluation, it was concluded that the present methods are in-adequate in that they do not account for commu-nity needs, student characteristics, local egonomic characteristics, sociological groupings, or other factors which influence enrollments. Present enrollment projection methods are based on census data for the age group of 18 to 24 years, since this age group is not representative of the community college student body, the statistic is urbayant. As a result, actual enrollments have surpassed projected enrollments by 0.5 percent to 10 3 percent for the past four years. Current enrollment projection methods are reviewed in detail. No recommendations for improvements are many (Author/DC)

The Council on Higher Education for the State of Washington is directed to study levels of fees and charges to students and, when necessary, make recommendations to the states institutions. Recommendations contained in this report include (1) Tuition and fees charged to fulltime-resident community college students be increased to \$330, the same as existed in 1971-72 (2) Fees at the 3 older state colleges be differentiated at the 3 Gioer state coneges be differentiated between lower and upper division students to im-prove direct access into that system. (3) she dif-ferential charge to graduate students and the tui-tion and fees for medicine, dentistry, and veteria nary medicine be adjusted upwards to reflect the decline in the value of the dollar since 1971-72.

(4) Fees, charged to Viet Nam veterans be adjusted and established at 85% of those charged to other resident students (5) Limited reciprocity agreements be sought to enable persons in counties adjoining the border of Washington, Oregon, and idaho to attend community colleges in the other state without payment of a nonresident differential. Statistical tables accompany the text. (Author/PG)

Faculty salaries in Washington public higher education, 1975-77, are reviewed emphasizing salary levels, faculty purchasing power, and com-parisons with other 4-year colleges and universi-ties. Findings indicate (1) The increase in inflation has eliminated any real salary increases for the average faculty member. In many cases, there have been substantial decreases in salary in terms of constant dollars. However, faculty productivity, when measured by credit hour loads, has thcreased (2) The 4-year Washington institutions faced increasing competitive problems, since salanes now lag behind the weighted average of the seven comparison states by an average of 12.5% As a result of these and other findings, the Council on Higher Education recommended that faculty salanes be raised by approximately 996 beginning January 1, 1975 for the 1975-76 academic year; and that a third increase to meet further cost of living increases be made effective July 1, 1976 (MJM)

This document is the fourth in a series of operations reports dealing with student enrollment data for the community college system in the state of Washington, and is intended to provide an accurate and current compilation of information concerning such enrollment. Data for the years 1962 through 1973 are included for historical comparison purposes with the academic year 1973-74 In 1973-74, 53% of the total student body were enrolled in academic programs, as compared to 67% in 1967-1968 in 1973-74. 45% were enrolled in occupational programs as compared to 28% in 1967-68 Statewide and institutional enrollment summaries are provided quarterly and annually, including FTE and headcount figures for academic, occupational, and community services programs. Steady growth is shown in all programs Student characteristics, including age, sex, source, ethnic background, and program goals, are also presented. (ER)

Following a short review of the literature and a thorough discussion of the pros and cons of community college tuition, an analysis of educational costs and benefits is made in Washington, the total cost of community college attendance, including foregone income, is approximately \$4,707 per year per student. Of this figure, the student and/or his family bears the responsibility for \$3.662 (77 8 percent) Even if there were no tuition and fee charges, these students would still i have to pay a large percentage of the educational This situation represents an economic barri-to education opportunity, which benefits er to educate opportunity, which benefits society Higher education is a social necessity, not a fuxury, and should be treated as such in

policy and, by funding. As a result of this study, three recommendations are made (1). That public institutions of higher education be supported at a level which makes access possible without tuition levels which economically would deny opportunity to some individuals, (2) That tuition not be increased until such time as the individual contribution drops below the range of two-thirds to three-fourths of the economic costs of attendance, and (3) The tuition charges be graduated within the public sector to reflect the growth in benefits resulting from additional education (DC)

This report is intended to serve as a resource document providing background and perspectives for a discussion of the roles and missions of the community college system of the state of Washington The objective is to help the community college system incorporate their planning and goals into the larger perspective of the state's total postsecondary educational effort Introductory material describes the statements of missions goals which evolved out of the State Board for Community College Education's 1971 report
"Design for Excellence" and Phase I of the
Board's subsequent Six-Year Plan adopted in 1973. Characteristics of the community college student are provided through statistical data detailing age distribution, ethnic composition, sex ratios, enrollments and access to education. The academic transfer program, general studies program, adult basic education, community services, and counseling and guidance services are all reviewed with respect to the degree of success these programs have had in meeting the recommendations set forth in the Six-Year Plan Descriptions of individual community colleges comprise a large portion of the report Vanous conclusions and recommendations for roles and missions that are stated throughout the document are accumulated and summarized in the final section. A roster of the advisory committee is appended. (AH)

Identifiers - * Washington

A survey of almost 6,500 community college faculty, trustees, students, presidents, and administrators was conducted to study the question of faculty relations in the Washington State community college system, with special emphasis on collective bargaining Respondents (38 percent of the questionnaire distribution) favored including part-time faculty in the bargaining unit by a 70 6 percent margin, and department/division chairmen by a 70 2 percent margin, but were against

including students by a 77 percent margin. Other results indicated. 522 percent of the respondents were against administrators, other than the president, being empowered to bargain independently, 64 3 percent were in favor of negotiations at the local rather than the state level, 75 3 percent were against the idea of limiting collective bargaining to the traditional economic issues of wages and hours, 54 3 percent favored both collectives have a percent favored both collectives. Responses were evenly divided on the advisability of a statewide salary schedule for community college Capulty Based on the survey results, a replacement of the Community College Professional Negotiations Law with a collective bargaining law designed specifically for community colleges is recommended Bargaining, should be conducted at the local level, (NHM)

The following tables\are the result of the Council on Higher Education study of 1972-73 unit costs in public institutions on higher education This study is the first effort in this state (and perhaps any state) to clearly, relate all costs to the instructional, research, and public service efforts of all the public institutions of higher education. The information base has been built from a detailed level (e.g., upper division biology courses or dental assistant technology courses started after the eighth day of instruction) and aggregated upward This report includes information covering the community colleges, the state colleges, and the two universities. The cost data are presented in a format compatible with the ", Program Decision Structure," and are also compatible with structures being developed nationally for the presentation and analysis of higher education costs. In reviewing the figures contained in this report, comparisons of overall averages except in those cases where the institutions offer reasonably similar ingructional programs should be avoided. The same rule applies to comparisons of graduate costs at the state colleges and universities where the differences in program size and type significantly affect costs (Author/KE)

The Councit on Higher Education was directed to review external educational options in the Some of Washington, to prepare a report describ. ing these options, and to develop guidelines for their establishment. This report provides a full in-ventory of external options in accordance with the directive. It was agreed that, in determining whether an educational activity would be con-sidered "external," the focus would be on ex-panding educational access. Options designed to reach out to students who are unable to spend considerable amounts of time attending class on campus were felt to be clearly "external" In light In light of these criteria, the institutions were asked to examines their officampus offerings. The docu-ment's maps and table are intended to acquaint

the reader with the nature and extent of off-campus offerings. (JMF)

Identifiers—Capital Analysis Model, "Washington This performance audit was conducted to provide the Legislature with an evaluation of the Capital Analysis Model (CAM) utilized in the development of the Washington State Community College System capital budget request to the Legislature. The CAM is a tool for measuring projected capital facilities needs in relation to current capital facilities, in terms of projected current capital facilities, in terms of projected day on campus enrollments. It is composed of space standards for 11 types of space utilized in the community colleges, based on estimated area remirements for each type of space as well as expected utilization of the space. This report evaluates the CAM in terms of three management functions: the planning function, the operations function, and the management review function. Lack of measurable long-range capital facilities objectives and reliance on short-range enrollment representations. projections are cited as the greatest weaknesses of the planning function. CAM space standards and space utilization standards are compared with actual space utilization and the space and occu-pancy standards of 21 other states in the operapancy summarus of 21 other states in the opera-tions review. The management review function of the State Board for Community College Educa-tion is stated to be limited by the Board's desire to "sell" the CAM as a capital budgeting tool. A summary of recommendations, examples of alter-native classroom willieston and and connative classroom utilization and seat occupancy rates and potential cost savings, and fextensive statistical data for each community college are-presented in appendices, as are comments on each recommendation by Washington higher edu-cation agencies. This document presents a comprehensive plan for future growth in instructional computing in the Washington community colleges. Two chapters define the curriculum objectives and content recommended for instructional coarses in the community colleges which require access to computing facilities. The courses described included data processing technology, problem solving, general introduction to computers and computers, and computers science. The use of computers as adjuncts to classes is considered in sections on computer assisted instruction, computer based in-struction, and computer managed instruction. Other chapters define the software, hardware. peopleware and other support required to adequately meet the requirements of the adequately meet the requirements of the identified course contents and objectives. The final chapter presents the resource specification and acquisition procedures which will permit the community colleges to move from the present level of fragmented, individualized approaches to meeting the instructional computing needs of students, to a planned and coordinated distributed computing network of compatable hardware and software, and to a more efficient utilization of total state computing resources. A glossary and bibliography are appended (Author/DC)

The governance and management of the com-munity college system in the state of Washington is based upon a division of responsibilities between the 22 district boards of trustees and the State Board In 1967, a formal division of responsibilities between the district boards and the State Board was enacted by the state legislature. Later reports of district and State Board activities divided these responsibilities into 10 problem areas: (1) operating budget actions; (2) capital budget and project actions; (3) personnel actions, including professional negotiations; (4) real property ing professional negotiations; (4) real property acquisitions; (5) program and curriculum related actions; (6) planning; (7) fees and charges, (8) legislative program, (9) State agency status; (10) multidistrict cooperation. This report reassesses, district and State Boardfresponsibilities in each of these 10 areas, and makes a number of recommendations. A matrix graph is appended which explains the statutory responsibilities of each of the boards, enumerates recommendations. the boards, enumerates recommendations, explains the implications of the recommendations for board responsibilities, and delineates the steps necessary for implementation. This document compares the operating effectiveness and costs associated with Whatcom Community College (WCC), a non-campus edutional system, to estimated alternative costs of traditional campus operation for WCC Com-parative data were obtained by using three other colleges as proxy institutions for a hypothetical campus-based WCC Among the findings of the evaluation were (1) WCC without a campus performed at least as well as a WCC with a campus in meeting the majority of its operating goals, (2) WCC without a campus did no better than its counterpart at assessing and, meeting the needs of target groups: (3) educational services were adequately provided without a campus; (4) WCC without a campus spent 10% less per, student and 6% less per course, and (5) one-third less in in-structional costs per student was spent in the non-campus operation. Overall, WCC without a campus appeared to be doing at least as well as the average performance of other campus-based colleges. Appended are three WCC documents entitled (1) WCC Looks at First Six Years. (2) Internal Mandates, and (3) How a College Without a Campus Plans to, House its Services Also appended are tabular data used in the study.

A conceptual basis within which all sponsors of community and continuing education cooperate is proposed in this paper cooperative agencies would include community colleges, school districts, community epark and recreation departipenis, YWCA's, IMCA's, public and private four-year institutions, vocational-technical institutes, and all other sponsors of community education. Definitions of such terms as community education, configuring education, extension, community service courses, and community schools are included. The historical perspective and contemporary demand for com-munity education are discussed. The roles of the various sponsors of community education are outlined with gaps and overlaps in service delivery identified. Funding practices are also reviewed. The final section of this document includes numerous recommendations as to the role of the community college in the delivery of community education programs. The need for cooperative effort with other community education related agencies is particularly stressed (Author/JDS)

Interinstitutional transfer of courses and credits, acceptance of the community colleges academic transfer degrees, and steps to be taken to achieve curricular articulation were the prima ry focuses of a study of the academic transfer policies of Washington state colleges and universities Data for the study were obtained from local institutional personnel and through collection of transcripts of Associate transfer degree holders and of native and transfer bacomeureate degrees Findings of the study indicated (1) the development of interinstitutional agreements

between most community colleges and senior institutions and establishment of transcript evaluation procedures have improved articulation overall. (2) those institutions which accept the AA degree in fulfillment of general education-requirements and those with well-developed evaluation procedures promote the progress of transfer students to graduation without excess credit accumulation, (3) students who transfer and graduate compare favorably with native stu-dents in terms of average grade point averages, and (4) a major impediment to a synchronized public postsecondary educational system stems from lack of agreement upon lower division course content Recommendations for further improving articulation conclude this report Study-related materials are appended (JDS)

A comprehensive survey of the 63 schools in Wisconsin offering vocational, technical, and adult education courses in the 1967-68 school year was conducted to obtain a description of current programs A total of 186,665 students were enrolled Complete data were obtained on 34 schools Some study highlights were (1) New resident students constituted 51.5 percent of the total group 42) 32 8 percent of the total state resident enrollment were in the 13 technical institutes. (3) Approximately4three fourths of the total resident enrollment at vocational-technical schools were new resident students. (4) More than one half of the total number of students were 20 years of age or older. (5) The majority of the students a t the technical institutes came from the younger age groups. (6) A greater per-centage of the students were enrolled full time in an associate degree and vocational diploma pro-gram than in college transfer programs. (7) Many students at the vocational, technical, and adult education schools traveled beyond a reasonable commuting distance to attend and (8) Out-of-school arrollments were small in number included the document are both narrative descriptions and tables-classifying data by institutions and type of program (DM)

HOW TO ORDER ERIC DOCUMENTS

The attached form is for your use in ordering materials from the ERIC Document Reproduction Service (EDRS). The form may be reproduced as needed.

Due to periodic changes in EDRS price schedules, document prices cited in the abstracts supplied to you are no longer valid. They reflect the price schedules current at the time the abstract was published in Resources in Education. Only the prices given for documents announced in the most recent months may be accurate.

The steps listed below should be followed in ordering ERIC documents.

- 1. Determine the format(s) in which the document is available from EDRS.
 - "Hard copies" are xerographic reproductions on $8\frac{1}{2}$ x ll paper stock, bound in Vellum Bristol covers.
 - (b) Microfiche (MF) only, HC Not Available from EDRS.
 Orders will be accepted for microfiche only;
 information on obtaining paper copies from the
 original source may be given in the abstract.
 - (c) Not Available from EDRS.

 Information on obtaining copies from the original source will always be given in the abstract.
- 2. Calculate the current price for the document in MF or HC, as available, using the price schedule on the order form and the <u>number of pages in the document</u>. The number of pages is shown in the "Note" field, immediately following the publication date. Calculate pages for microfiche based on 96 pages per microfiche.
- 3. Fill out the form as instructed. Be sure to clearly indicate whether microfiche or hard copy is desired, and supply the appropriate unit price for the chosen format.
- 4. Calculate postage based on your total order if multiple copies or documents are being ordered.

The ERIC collection consists principally of unpublished and informal materials. Some documents are available only on microfiche because the original manuscript failed to meet the physical standard necessary for hard copy reproduction. Best copy available will be supplied. However, EDRS will replace products returned due to reproduction defects or incompleteness.
